Genetic Modification Exposed!

The Fourth Babushka Mini-Egg

Prologue: The Seven Seals of Revelation?

In today's age of electronic multimedia, we have become conditioned to information overload. It has become increasingly difficult to discern distracting headlines from what is important, life-impacting news. Often we do not pay attention to some of the most important things that are happening in the world unless we see a big fire on our own block that gets our attention.

In fact, the very survival of the human race is at stake. Soon no one will be able to ignore the very serious threats that have already begun to shake our daily lives. Honestly, unless your personal well-being has already been upset or inconvenienced by the rapid changes taking place in the world today, you are probably too involved in your own busy life to be paying attention. Please read this short Babushka story and be informed. We are under serious attack by an uncontrolled flood of technological change in agriculture known as GMOs.

Why are GMOs so dangerous to the biological well being of both humans and all life on earth? Why are honeybees and many other insect and bird species dying out, some becoming extinct?

The real depth and extent of GMO related problems has been concealed from the public by governments indebted to huge corporate interests. This small Babushka book will teach you simple principles of genetic science and technology so that you will better understand what is being done to our food. Unless you don't need to eat, you had better know about this issue!

Criminal scientists have spliced out the natural immune system safeguards found inside each biological cell with devastating consequences to the environment. They have removed the embedded genetic intelligence stored in every cell, which protects the cell from cross fertilization with other species and immunizes it from deadly viruses by denying them entrance into the cell's nucleus where the genetic material is stored.

Each cell was designed with an immune system controlled by an implanted policeman to keep the species' hereditary characteristics from being attacked by the thousands of deadly bacteria and viruses roaming about the environment. Greedy genetic scientists wanted to insert foreign genes into food crop seeds. It has taken powerful technology to transfer the genes and chromosomes not natural to a species across the forbidden barrier set up by the ever watchful eyes of the built-in policemen processes that preserve the specie. But eventually, science succeeded in being able to genetically modify a cell's or seed's DNA by splicing out or penetrating the cell's protective defenses against foreign genetic material.

Today, big seed and chemical companies can mix and match genes like treats in a candy store. Why are fish genes embedded in tomatoes, for example? To keep track of the money earning potential, every trans-

ferred gene is patented. Fruits and vegetables now come labeled with a number stuck on each piece or package in order to track the genetic variations of produce that might otherwise look very much the same to the eye. Check out the produce section of your local grocery store!

Genetically modified foods provide questionable to dangerous "benefits" to the consumer but much higher profits for the agribusiness corporate giants. Every patented gene provides a reason to charge another fee to the farmer. Of course, that fee must be paid to the corporation that originally inserted the foreign gene thus modifying the genetic material of the vegetable or fruit.

The FDA should have enforced labeling laws to tell us what genetic material is hiding in every fruit and vegetable sold to the public. They do not do so because most people will not want to buy and eat genetically modified foods if they have the choice.

Today, when we buy produce from the store, we do not know what is embedded in it. There could be pesticides, hormones, artificial colors, synthetic tastes and antibiotics systemically embedded into the cells of the food plants. They should be disclosed in truthful labels, but the FDA will not enforce existing laws, favoring powerful special interests with big money instead. The rest you can imagine yourself. A US Senator got caught with dollars packaged in his freezer as seen on the TV news.

When we eat good food we feel well. When we eat rotten food, we get sick. Not only is this common sense, it follows the natural laws of cause and effect. When there is a delay or a lengthy period of time between the cause and effect, people may miss the connection altogether or ignore it for now out of immediate need to eat cheaply. Eating food that has been genetically modified may be consuming an embedded "poison" that will eventually cause some kind of disease or biological malfunction that means a person dies sooner than he or she normally would – and perhaps more painfully.

People around the world now face a dilemma. Since 2000 - just eight years ago, the use of biological technology has grown so rapidly that now 95% of all vegetables sold in America have been genetically modified and permanently changed. Their natural policeman of the immune intelligence system have been removed, spliced out as evidenced by the numbers stuck on every fruit and vegetable sold by your neighborhood grocery store.

Besides big corporations, hundreds of lawyers are lined up at the money trough of GMO feed. Furthermore, I believe that the consumption of GMO foods makes people and animals more vulnerable to deadly bacteria or viruses in fulfillment of Bible prophecy, which predicts 1/3 of the population dying from malnutrition, diseases or plagues. I think many of them are linked to the food we are eating.

When He broke the third seal, I heard the third living creature saying, "Come." I looked, and behold, a black horse; and he who sat on it had a pair of scales in his hand.

And I heard something like a voice in the center of the four living creatures saying, "A quart of wheat for

a denarius, and three quarts of barley for a denarius; and do not damage the oil and the wine.”

When the Lamb broke the fourth seal, I heard the voice of the fourth living creature saying, “Come.” I looked, and behold, an ashen horse; and he who sat on it had the name Death; and Hades was following with him Authority was given to them over a fourth of the earth, to kill with sword and with famine and with pestilence and by the wild beasts of the earth. (Revelation 6:5-8.)

The laws of physics never sleep. Just listen to the NEWS shows announcing billion dollar damages to farmers due to spoiled or diseased food crops. These losses are growing. In fact, the prophesied picture of worldwide starvation is already coming into focused reality. Remember the news coverage of the problems with spinach in California? At least 28 people died from E-coli bacteria, and another 135 needed kidney transplants. Government experts blamed cows on the hill thinking that uninformed or ignorant people can be told fairytales to cover up their crimes.

In July 2008 front page news reported that 1,000 people got horribly sick with salmonella – supposedly due to tomatoes. The livid farmers shut down by an ignorant government bureaucracy were prevented from harvesting their tomatoes. Later, the truth came out that the real problem involved jalapeño peppers. Meanwhile, tons of tomatoes were left rotting in the field costing billions of dollars. Just as the tomatoes were not the cause, I do not think that the cows were either. The reason for the spinach salmonella outbreak has been hidden from a gullible public not outraged enough to demand answers. I suspect genetic manipulation. It is this kind of problem grown larger that will cause increasing food shortages until the prophecies are fulfilled.

On 7/21/08 San Francisco Bay Area Channel 7 announced that Jalapeños were contaminated with salmonella. They said experts cannot figure out where or how the salmonella contamination occurred. They have looked at the farmers’ fields, process distribution centers and at the end of the distribution chain of our local grocery shelves. That kind of scary announcement will become more frequent because the government can no longer cover up the crimes of corporations like Monsanto that have violated God’s laws against genetic modification¹.

Politicians and their expert advisors increasingly blamed the growing shortage and high cost of food on high gasoline prices. I guess there were no cows nearby to use as an excuse this time. Even more alarming, I have read regular reports on how honeybees are dying in massive numbers. Without honeybees, food shortages will only grow. Perhaps by 2009, the truth will come out when experts can no longer deny the loss of a 30 billion dollar crop due to a shortage of bees.

Other farmers complained about a strange, new fungus blight that ruined their 2008 corn harvest. Perplexed scientists wondered why it did not respond to powerful chemical treatment. Even my vineyard was

¹ God sent an asteroid that totally destroyed human civilization on 5 February 2287 BC because the pre-Flood peoples were messing with Genetic Modification. This asteroid strike began Noah’s Flood and destroyed what the Greeks called Atlantis – known for its highly advanced technology. Check out the third Babushka book for proof from science.

not spared this year. My manager used a new herbicide so dangerous that it has destroyed 77% of this year’s grape harvest, which has limited my retirement income big time.

To make things worse, I no longer see my humming birds visiting my feeder. There used to be over 50 fighting to get a place at the sugar bar, but they have suddenly disappeared. All dead, I guess. Did GMOs play a role in their disappearance? Many farmers find themselves at the brink of bankruptcy. They trusted the big corporations and government agencies because they did not understand the invisible GMO dangers to the health of their crops and customers. These problems are gathering speed along with the increasing sickness of many people in my neighborhood - none of this is yet in the news.

The medical profession is perplexed about the many new diseases they have never seen before. Hospitals fight super-bugs that do not respond to conventional medicines. This kind of problem will also accelerate in a crescendo until it breaks like a dam producing massive death as prophesied in the Bible. The coming Apocalypse 2008-2015 is announced, and it is certain to take place. If you mess with God’s creation, don’t make Him angry by destroying the earth for the next generation. Don’t blame Him for the food shortages and many premature deaths from horrible diseases soon to increase to plague levels.

Let’s be informed about what is done behind Monsanto’s closed doors. Let’s press the corrupt FDA to do its job and protect the public instead of catering to big corporations more concerned with profit than with screwing up our food. It will not matter after you are sick or dead. Soon eating GMO food will be the only choice in the market. Perhaps after you are dead someone could sue the lawyers for compensation.

Looking back on my own life, I have witnessed nuclear explosions and lived through the destruction of World War II, yet a bigger fire now burns out control that will affect every human being on this earth. A reckless, uncontrolled explosion of GMO technology has created an urgency in me to share with you my analysis of a few selected magazine articles that expose how GMO’s affect every society on this planet. I am not an expert in genetics, but I have learned lessons from nature that I have applied over the years to solving hi-tech problems with new inventions. I hope that you will grasp the importance of what I report in these pages.

We may be running out of time - literally, and it is possible that you and I will not survive to see the next generation. Please forgive an old retired scientist from Germany seeing what is urgent. My English is not the best, and I do not have time or funding for a professional editor to smooth out this report. Hopefully, some one more gifted will also write to warn people of the coming events we all must face. Since most people do not object to eating genetically modified food, I would hope that reader will forgive my genetically modified English, which is not always so perfect. Just realize that here you will get my honest opinions and concerns, copied and collected from science and news magazine articles that I want to pass on for what it is worth.

As an inventor of high technology, I see the world from a dual railroad perspective, which is better balanced as a system. One rail is science,

and the other is a Bible-based faith. We need to understand both our physical world and the spiritual side of man, so a dual railroad makes more sense. Observing the two-rail laws of cause and effect will cause changes in the physical world for the better or worse. Looking from a historic perspective of an ancient 4,000-year-old book - the Bible, we can use it as a set of guideposts or railway stations to comprehend what humanity has accomplished and where we are going.

So my gene technology book is presented from a dual rail perspective. Its initial introduction is focuses on the Bible technology rail as compared to the second rail of GMO technology. Both are valid if you want to see our world from a balanced systems viewpoint. By applying old-fashioned logic trained to think like standing in the middle of a 360° movie theater and looking around at the big picture of what is happening. It is the opposite approach to the lazy tunnel vision of most. Two rails are more balanced. One rail is not very stable.

A Bible Rail

Genetically Modified Organisms - GMOs are a bigger threat to human survival than terrorists or nuclear bombs from the Middle East. The public is asleep to this great danger that is destroying the nutritional value of all food on earth. The result will be human extinction if God does not intervene. Therefore, let me first reflect from the Bible rail on the spiritual side of the GMOs' attack on the natural environment to understand my statement. The spiritual side of humanity is not allowed in our universities and the news media avoid mentioning it; therefore, we are blinded from seeing the obvious. I prefer to look in the Bible first and see what is prophesied to happen. When we connect prophecy with the spiritual side of man, we can more clearly understand the world around us with 360° vision and hopefully exchange it for our tunnel vision.

When I rearranged the mixed up pages of Revelation in the Bible with the Hebrew Alphabet Number System, the sequence of events became much clearer to me, and I began to understand a thousand-year old prophecy puzzle. I wrote two books about that, much to consternation of monorail theologians because it threatened many of their cherished doctrines.

As I was finishing my fourth mini-Babushka doll or Russian Egg book, **Genetic Modification Exposed**, an idea hit me square in the face. Understanding Revelation with a new perspective and lining it up with the latest technical advances in gene technology plainly indicates that the environment is collapsing rapidly - like uncorking the genie bottle or Humpty Dumpty falling off the wall to be forever broken. It came to me that the four apocalyptic riders mentioned in Revelation is not God punishing the world for its evil. Instead, they are manmade trials, consequences of evil and plagues of self-destruction. They include the destruction of the environment through **GMO technology**.

When he opened the fourth seal, I heard the voice of the fourth living creature call out, "Come!" I looked and there was a pale green horse! Its rider's name was Death, and Hades followed with him; they were given authority over a fourth of the earth, to kill with sword,

famine, and pestilence, and by the wild animals (bacteria/virus) of the earth. (Revelation 6:7-8, NRSV)

Notice the key words "come" and "green" for each horse called out as I finish and insert a sentence to explain why:

"Come and see what the earthlings are doing to my earth."

Now you can witness in the next verse on what is happening after, a mode to describe a transport system or transformations, which is pale **"Green."** We even use that term today to indicate organically grown plants, but here in Revelation the pale green horse represents the famines and diseases that will come from using GMO technology on various food crops and other biological plants in nature.

Then the 5th Seal shows many executed people under God's throne. These are the folks who dared to speak out against the brutal, atheistic technology that is destroying the environment even as it makes mega-corporations billions. Ultimately, GMOs will be one of the primary causes for the coming mass starvation of humanity together with war and violent conflicts resulting in the deaths of **billions** of people. If John in Revelation would have been trained in GMO technology, he would have added the following words to Revelation's 5th Seal: the beheaded saints ask God:

How long will you look on and see your world destroyed? Don't you see that we are not able to support the next generation because our food is genetically screwed up with terminator genes embedded in every food plant? Even the naturally intelligent protection system has been removed from all seed cells! Save us before every food grown on this earth becomes extinct!

Today hi-tech GMO foods can be seen in local food stores everywhere. GMOs irreversibly change the food value of every fruit and vegetable. They are already causing massive extinctions of insect and animal life as well as the deaths of people, such as those who ate spinach grown in California a little while ago. The laws of cause and effect are ever activated. They never stop or go on vacation, so it is just a matter of when the GMO food chain collapses resulting in massive starvation and causing global conflicts, including nuclear war. Yes, the consequences of producing and distributing GMO seeds, planting them and selling their harvest could end all life on this globe.

Horrible, manmade pestilence is mentioned in the scriptures. The Bible predicts that the rider of pale **green** apocalyptic horse symbolizes the deaths of one third of the world's population. Recently, American genetic scientists dug up a graveyard from the Middle Ages in order to recover the genetic material from the deadly viruses and bacteria connected with the Black Death or plague in Europe. Modern biogenetic technology is taking this genetic material to increase the potency of currently produced bio-chemical bombs for the US military without telling the public about it. God is allowing what humanity has created to teach our generations about the effects of evil GMO technology. Along with this evidence from science, the biblical prophets of John and Zechariah accurately described the last Armageddon conflict against Jerusalem

coming very soon as including horrible biological plagues. These are two witnesses we can trust to establish truth.

So the first angel went and poured his bowl on the earth, and a foul and painful sore came on those who had the mark of the beast and who worshiped its image. (Revelation 16:2, NRSV)

This shall be the plague with, which the Lord will strike all the peoples that wage war against Jerusalem: their flesh shall rot while they are still on their feet; their eyes shall rot in their sockets, and their tongues shall rot in their mouths.

And a plague like this plague shall fall on the horses, the mules, the camels, the donkeys, and whatever animals may be in those camps. (Zechariah 14:12-15, NRSV).

Mankind's insanity, and not God, will launch the Apocalypse with gene warfare. At the last battle of Armageddon, the soldiers' eyes will rot out while the people are still alive! About 6½ years earlier, an exchange of nuclear bombs controlled from space wiped out many Arabic cities, and its accompanying nuclear fallout contaminated much of the earth. These bombs were sent in retaliation for a successful nuclear terrorist attack against New York City. (Check out my book, **Apocalypse Prophesied**.) Even dates for major events of the last days are now announced on the Internet². God sees what is happening on earth. Because of the massive outbreaks of nuclear poisons and GMO diseases caused by a humanity gone totally corrupt, he will need to personally intervene in order to save humanity.

Then we will see God's finger in the sky as it is answered in Revelation seals number six and seven:

When he opened the sixth seal, I looked, and there came a great earthquake; the sun became black as sackcloth, the full moon became like blood, and the stars of the sky fell to the earth as the fig tree drops its winter fruit when shaken by a gale. The sky vanished like a scroll rolling itself up, and every mountain and island was removed from its place. Then the kings of the earth and the magnates and the generals and the rich and the powerful, and everyone, slave and free, hid in the caves and among the rocks of the mountains, calling to the mountains and rocks, "Fall on us and hide us from the face of the one seated on the throne and from the wrath of the Lamb; for the great day of their wrath has come, and who is able to stand?" (Revelation 6:12-17, NRSV)

God now stops humanity's insanity gone amuck and saves his world as described in Daniel's 1,260-day prophecy. He will use in a mini counter-offensive apocalypse, like an emergency surgery, to save humanity from the beast coming out from a wounded and stressed out earth. God's Wrath is now provoked to the limit in order to stop our destructive behavior. God will destroy our present civilization because of its great evil, but He will save a worthy remnant of all nations to continue on His

² The first Babushka egg: **Apocalypse Prophesied**, From Eden to New Jerusalem-God's plan for humanity, www.apocalypse2008-2015.com.

earth like the previously Atlantis civilization disappeared in Noah's age as referenced by Jesus 2,000 years ago. Watch people start the apocalypse with the nuclear destruction of New York on 9 February 2009, and God will end it on 17 September 2015 with an asteroid³ already in orbit 820 days around the sun that will break up in our atmosphere.

The third angel blew his trumpet, and a great star fell from heaven, blazing like a torch, and it fell on a third of the rivers and on the springs of water. (Revelation 8:10, NRSV)

In this way, God will save His world all within the time cycles prophesied by of Daniel's 70 Weeks, seven-year Apocalypse as the ancient calendars and clocks from other cultures have verified:

21 December 2008 - 21 December 2015

The World doomsday clock now set at 12 o'clock. The hour has arrived and is even indicated on ancient clocks now deciphered, like the Aztec-Hebrew-Chinese-Antikythera clocks you can read about in my third Babushka book, **Asteroid Answers to Ancient Calendar Mysteries**. Bible prophecy can now be better understood due to the rearranging of Revelation's mixed-up pages along with this incredible testimony from ancient clocks and calendars from around the world.

In Revelation, the Beast system comes from the sea [nations] and ends with another Beast system coming from the earth [nature]. It is all connected with Sixth Seal as God's answer to save our earth with an asteroid event. He will remove all evil perpetrators of a modern global society totally corrupted and gone amuck on [10 September 2015] similar to what happened before in Noah's day. In the process, He will burn up all GMO aberrations to restore good food given to humanity. Even now, several heavily protected seed banks exist to continue the seeds naturally developed from the original creation. Some are saved on a Norway island fault⁴ like a boat in Noah's time for the future generations.

God is not a crazy, out of control tyrant. He is slow to anger and loving, always reacting with patience and evaluating the alternative favorable for humanity, but he must sometimes stop our madness with drastic measures to keep us from destroying ourselves with technology that does not benefit humanity. This has happened occasionally in history when He had to do stop or slow down human folly with natural calamities.

As Creator with a good business sense, he is continually evaluating globally what is happening to his earth. The course of history must conform to his original plan for humanity that you can read about in the first Babushka egg book on the Internet. Adjustment is needed when humanity chooses the wrong path heading into destruction of his earth and needs God's correction. Checkout his manual written in Revelation, the last book of the Bible, which ends with hope for a future generation but this time many more surviving than eight people in Noah's time. The Seventh Seal-Seventh Trumpet concluded by announcing a birth-

³ "Killer Asteroid Coming our Way," **Popular Mechanics**, December 2006. "Incoming (an asteroid prediction)," by Gregory Mone, **Popular Science**, September 2003.

⁴ The World's Agricultural Legacy Gets A Safe Home, Vault on Arctic Isle Would Protect Seeds, By Rick Weiss, Monday, June 19, 2006; Page A01, <http://www.washingtonpost.com/wpdyn/content/article/2006/06/18/AR2006061800950.html>.

day of a new civilization, the millennial reign of Jesus, which will last 1,000 years without war and harmful technology that destroys the environment. Read Revelation from a different perspective.⁵

GMO Technology Causes Global Food Supply Collapse

Now let's look at the other rail of physical science. I am not a professor or employee of a GMO company to be permitted to pass through special locked doors of secret laboratories around the globe to tell you about the black magic of gene technology. What I print here is gleaned from recently published magazines. Articles appearing here and there shocked me to my bones. Not being a writer and good in English, I was nevertheless compelled to speak out and put it together as a concept to understand what is kept from the public, hidden by the FDA, the government and the corporations screwing up our food.

The public is left totally in the dark what is happening to our familiar food chain and do not understand why so many die and become sick with strange diseases never heard before. Being prevented to checkout hidden scientific genetic practices, I had to rely more on the extraterrestrial intuition side like looking from a dual perspective railroad analogy science and religion, which is more balanced. That gave me some insight to share of what is covered up by our FDA government, universities and special interest powerful global corporation keeping the public in the dark to keep their black magic undetected.

The Bible, like a mirror reflection, reveals reality only you the reader can interpret the lines in your face not seen by others. Being disturbed that I no longer can make my favored German ethnic food screwed up by Frankenstein gene technologist I get the answers from magazines I read revealing secrets from the experts. My conclusions therefore are only one opinion of many, but you do with that information and delineate truth from fiction but hope you will apply and use a dual railroad for balance. My journey of discomfort started in writing a letter to the governing board in Mendocino, an agricultural county of Northern California.

Mendocino is surrounded with vineyards and redwood forests along the Pacific oceans a nice place to live. But if you can no longer buy your favored food in the market, that is another matter and should concern you, too. Let's start on a journey of reading magazine articles to explain the GMO fire burning into a volcanic eruption. Let's read some articles written by various people who define GMO and reveal serious matters of life and death concern for all humanity.

⁵ The second Babushka book, **Mystery of Tammuz 17**, available on the internet in four languages, tells of a newly discovered Hebrew Alphabet Number System that dates the Apocalypse. www.apocalypse2008-2015.com

Genetically Modified Organisms

(Quoting a September 19, 2006 letter.⁶)

There are many good reasons to obtain food supplies now. The United States has become a net importer of food for the first time in its history. Remember also that the major foods grown and exported by the U.S. are GMO wheat, corn and soy, which are very deleterious to human health. One of the very dangerous programs that has been instituted in the United States without any valid research is genetically modified food GMO. Huge changes in our food have been made by this new technology.

A piece of DNA can be taken from one plant and spliced into the DNA of another plant. Even more alarming, DNA can now be transplanted into different species. Human beings are currently being exposed to new foods from plants containing pieces of DNA from bacteria, viruses, fungi. Naturally the incidence of allergic reactions to these foreign strange foods is rapidly rising. World famous geneticist Dr. Mae-Wan Ho states that the insertion of foreign genes into the host gene pool has long been known to have many harmful effects including cancer in the recipient organism."

That information is one year old and already obsolete. Matters are a lot scarier now - even just looking at one rail from Bible prophecy, rejected by science. As an introduction to GMO technology, I will include a letter written to the Mendocino Supervisors:

An Open Letter to Mendocino Board of Supervisors

(11-11-06)

Board of Supervisors Office
501 Low Gap Road, Room 1090
Ukiah, CA 95482

Michael Delbar

Jim R. Wattenburger

Hal Wagenet

Kendall Smith

J. David Colfax

Reference: Mendocino County Tax Revenue Loss & Agricultural Ordinances

Dear Honorable Board of Supervisors,

Mendocino County has historically led our nation in preserving its agricultural heritage for future generations. It has done so by making wise choices in designing regulations for the general welfare that also protects small organic farmers from the unfair practices of big corporations and other special interest groups.

⁶ CONSIDER STORING FOOD NOW, By Dr. James Howenstine, MD., September 19, 2006, NewsWithViews.com.

My concerns are the unfair economic pressures being placed on local grocery stores that dictate what they can sell in our county. Mendocino County has laws on the books that are supposed to protect organic farmers, but these good laws are to no avail due to a serious loophole in their structure. This loophole is now being used extensively by huge corporation to economically shut down the last remnant of organic farmers in our county. This trend globally threatens to permanently destroy a way of life we all remember. The health of our community is at stake!

What is this problem that threatens to completely destroy our agricultural well-being?

Less than three US corporations control the future food supply of our earth through their monopolistic mass marketing of genetically modified seeds and food known as GMOs. It has now reached the point that they are changing every fruit and vegetable you are familiar with because they have bought up almost all of the independent seed companies worldwide.

Part of their greedy strategy is to insert terminator genes in most fruit and vegetable seeds so as to make farmers absolutely dependant on them. By imbedding terminator genes into food, these mega corporations not only control every farmer by requiring them to pay a license fee to buy their seed originally (even if only one patent protected gene is imbedded), but now farmers cannot collect seed from their own crops. They must buy seed from these big companies every time they want to plant.

Because terminator genes keep the crops grown from producing any of their own seeds that can germinate next time around when planted, we are headed to a time of massive global starvation. As of this writing, scientists are already seeing failures in India's rice production, and the Japanese government restricts agricultural imports from the US. If even one of those corporations goes bankrupt (like Enron, for example), then farmers would not be able to find original, non-GMO seeds anywhere. They will not be able to plant another crop to feed us. This will have a horrendous affect on our society bigger, perhaps, than even a terrorist strike with nuclear bombs.

Let me give you some facts. First, an illustration of what we are dealing with: think of a mermaid in a city park in a fountain. Question: "Is the mermaid a human being or a fish?" If we cannot decide right off, then we follow it through with more questions like, "If it has no arms, would it be fish?" You may counter, "But that is mythology, and we live in a real world!" Then let me ask you a couple questions from the real world, "Why do we have fish genes imbedded in tomatoes without being labeled? Where do we stop?"

Go to any supermarket, like a Safeway or Costco, and check out what you will actually find there in the produce section. This is the real world and not ancient mysteries. Mendocino County has laws on the book, which allegedly protect local and regional organic farmers, but what do we see on the shelves?

Please notice that most fruit and vegetables have now a little sticker label pasted on with a control number. This control number serves two purposes:

1. So that lawyers can check out genes imbedded to make sure a license fee is paid, and (This other reason is vastly more important.)
2. The sticker number identifies the source of the cause of illness or death from when people eat such modified products.

For example, when a spinach field in San Jose, California recently caused several deaths due to bacterial/viral contamination, it made headlines to unsuspecting consumers who trust in our food growth and distribution system. Most people are not educated about the chemicals now used for pesticides and herbicides. They do not know how these chemicals are systemically imbedded in seeds, which then reproduce those chemicals in plants we eat to become biologically antiseptic.

The idea sold to farmers is that they can save money from not buying and applying dangerous pesticides because the pesticide is now genetically imbedded in the seeds and plants, which grow from those seeds. **Consumers are not told that genetically embedded pharmacy seeds used by one farmer can pollute or spread to neighboring fields by natural means. In other words organic crops can be involuntarily subjected to contaminated pollen and their economic and nutritional value destroyed by a neighbor's choice of GMOs.**

This means that consumers choosing organic fruits and vegetables may unknowingly eat biologically inserted, drug-laden foods without knowing it. Let me state it again in other words. Many drugs are now produced by genetically imbedding complex chemical proteins into corn or soybeans, for instance. As the plants grow, they biologically manufacture pharmaceutical drugs cheaply that may be especially designed to treat heart ailments or kidney diseases. Healthy people should never eat such drugs as a by-product of enjoying corn or soybeans. Wind and weather, animals, birds and deer population will transfer genetically laded pollen from field to field. The end result is that people will be ignorantly consuming potentially harmful pharmaceutical chemicals. The danger is particularly great for those already taking some doctor prescribed drugs.

I am sure you have read about or seen the reports of wild birds, deer and other animal deaths in the wild. There have been similar deaths of domesticated animals like chickens, ducks and geese. Then there is the increased frequency of unreported mad cow disease cases. What you do not hear anything about on TV is the cause of these outbreaks because the FDA is not doing their job of protecting the consumer. They ignore the appropriate Federal laws and do not respect our local Mendocino laws. The media is careful about not reporting these controversial issues because they need the advertising dollars from these huge corporations, who also spend millions to lobby Congress and the public so that they do not lose their licenses; therefore the consumer is not protected and kept ignorant.

Let's examine the existing laws spelled out to protect the consumer. For example, in every cookie, cake, or product sold in supermarkets must

carry legally defined labels listing their contents. So when we check out our favored cookie at Safeway, we may find 30 or more chemical ingredients mentioned in label. Honestly, I have no idea why they put all of those chemicals in a cookie, but because of the label, I can choose not to buy it.

But let me ask a question? Why is the Federal labeling laws not applied to genetically modified foods (GMOs)? Many other nations do.

As an example, why do GMO onions cost \$1.75/lb now? They are way too large for my kitchen use. Many are bigger than an oversized grapefruit and no longer taste like onions. Yet I can find onions without the sticker in a Mexican small market, which still taste like onions and cost only 25 cent/lb. We need to keep these small markets available to the public.

Have you noticed that potatoes turn green after only four weeks in your storage at home? Producers pump them full of gas to preserve their white color, and then as they lose this bleaching gas, they turn green. Just try making German dumplings with them! The raw potato dumplings dissolve into a gray soup rather than swim delightfully on top of clear boiling water?

In regards to meat, I have heard that bacon has imbedded horse genes in it to reduce the fat? Look at it yourself. Some sliced bacon looks more like red beef jerky to me instead of the pork bellies I have seen all my life. I ask the question, "at what point does the insertion of alien genetic material change the identity of the animal or plant? Does bacon with 50% horse genes violate federal labeling laws? I thought that horsemeat is not allowed to be sold for human consumption in this county, but why is it allowed in bacon? Why can I no longer buy original pork with fat? Why do I need to add butter to the pan in order to fry bacon? Do you know what the unusual red color in bacon is?

Think about the Jewish and Muslim people who are not informed about the genetic manipulation of the meat they are eating. How can it be kosher or halal if the meat is imbedded with unclean animals? Our huge commercial interests show no respect for these religiously based dietary laws, yet the free practice of religion is protected by our federal constitution. Why does the FDA not tell the consumer about what has been added to the cow genes? Check out the beef on the shelf in your Safeway supermarket and notice that the fat is now red or pink and no longer marble white. Also, it is almost tasteless - something indefinable like dry chicken or turkey instead of pork. What unknown foreign animal genes have been inserted in it to make the cows and sheep grow twice as big?

It is expensive for me to travel to Mexico just to have the taste of original beefsteak. I can't find any beef or lamb in my neighborhood market anymore that doesn't have that red fat, so I don't buy it. Are labeling laws only applied to those who cannot pay for lawyer fees, or do we have local laws to protect us from corporate greed to warn us about all these embedded chemicals and genes, which today poison our food without our knowledge?

I could ramble on as a man of 75 years to tell the new generation what they are missing. The wonderful ethnic kitchen that I remember with good old-fashioned vegetables, which smelled vegetable or even sim-

ple weeds has now become extinct together with fish, insects, butterflies and other wild life. I see a culture dying in front of our eyes, and the citizens are individually unable to control such evils. You must take action to preserve our 1000-year old food crops in their original genetic form for our future generations, or our grandchildren will be deprived of the decent food their grandfather ate.

Organic farmers are being put out of business by gigantic factories with mass produced food manufactured with artificial colors and flavored with dangerous chemicals you do not want to know about. Cows in feedlots are still forced to eat animal byproducts that we know increases the risk of mad cow disease – even though you no longer hear about it in the news. There is a reason why Japan still doesn't buy American produced beef or rice. Will these artificial Frankenstein foods fool people forever?

Let me give you a last example that affects my home in this county. The potential exists to totally devastate the Mendocino County tax base if no controls are put into place. Time is running out! We need to act before it is too late.

I am a retired scientist from the Bay area and became a farmer owning a vineyard in Philo. My future projection for a wine industry is foreboding due to what I have learned since I started over 10 years ago. In about 5 years from now, we will see a gigantic screw-up in the Californian grape growing industry similar to what happened twenty years ago. Remember when the "experts" planted what was supposed to be a superior, genetically modified grape rootstock?

That fiasco cost billions of dollars and affected every grower - large or small, rich or poor. I was told, as a new vineyard planter, that University of California Davis sold their entire, massive inventory of genetically modified rootstock with the full knowledge that it was contaminated. They knew that every vine planted would die in about 10 years. Market conditions following that massive destruction were a primary reason why I invested my retirement in a vineyard. Partly, I expected to make money and partly I hoped to help save the industry. It took 20 years for the wine industry to replace 90% of the vines in California with healthy rootstock.

Now I note that grapes are on the list for genetic modification by the same university department. I already see vineyards covered with a fine mesh to keep birds from transmitting these pollens to neighboring vineyards. That is not enough to keep my vineyard and hundreds of others' acres from being polluted by these genetically modified grape vines. The potential is there to destroy the production of unmodified grapes and wines, which will totally erode property values and revenue to the county tax coffers.

Our wine industry will collapse quicker than a San Francisco earthquake tumbled high rises. It will be impossible for us to compete with foreign wine producers who can claim original vines producing grapes and juice not genetically modified. The California wine industry could end up with the same frustrating problems that Mexican farmers struggle with when they find huge genetically modified gigantic corn popping up in the middle of their fields planted with traditional seed. You

can see their ruined fields for yourself in the magazines referenced at the end of my letter, or you can read about it in the Sacramento Bee.

Perry Schmeiser made on a special trip from Canada at his own expense to warn Mendocino County at the time of the previous election. Will we listen to him? He was put out of business the same way. Will our organic farmers follow the same destructive trail? Will foreign wine producers invade our markets after the reputation of our own wines is destroyed over night? Our reputation for superior, classic wines has taken hundreds of years to build up. Why should we let genetically modified mixed and matched vineyards destroy neighboring vineyards through random genetic modification so that our grapes are only good enough for a "two buck chuck" bottle?

I urge our supervisors to become informed! We need to ban the planting of genetically modified grape vines. Our county needs to introduce labeling laws for genetically modified vegetables, fruit and meat products in our county. It is the only way to slow down future disasters.

Let the consumer eat the modified food if they want, but let the information be there for us to make an informed choice! This will help an organic farmer to preserve our produce heritage. At least it will give a message for future generations to remember our struggle against corporate greed gone out of control, just as our patriotic ancestors fought against the imperial powers of Europe 200 years ago.

A Scary Update, April 2007:

A Warning to 21st Century World!

When I investigated just six months of magazine and TV news reports, I concluded that Genetic Science is accelerating at an exponential pace towards the extinction of all original seeds. What is perhaps debatable today will be known as facts by the next generation as the 21st century civilization curse. Relentlessly continuing on its uncontrolled path of destruction, greedy GMO engineers will totally devastate our world in about ten years. Over just the last six months of published information, I read about massive extinctions in the insect world. When I checked the meats and vegetables at the market, I found them so screwed up that I can no longer recognize what I am eating. Nothing looks or tastes like it used to.

Soon we will have a Nurnberg trial repeat, but this time it will be GMO criminals standing before a world council raising their hands and swearing to tell the truth saying, "So help me God." But this time God will be the judge, and like in Noah's days, he will pour out his wrath on all the world because other men have caused the starvation of over 2 billion people due to genetic manipulation of foods. That is the significance of the green pale rider prophesied in Revelation.

The opening of the seven seals in heaven [Revelation 6:1-7] will signal the end to what man is allowed doing to the environment, which is destroying the earth. That is what causes the four apocalyptic riders to appear. Do not think that this scenario is farfetched, but just read the next magazine article published. Apply your own common sense, if you still

care about this world. God's answer will be to save humanity following seal number six and seven. Check it out.

I need to comment briefly on my previous Babushka books. Please notice that my books about the coming prophesied apocalypse and God's plan for humanity were written from the perspective of a dual rail railroad. I use that analogy to connect science with the Bible. This approach allows us to see our modern world from a two-sided perspective, the physical and spiritual dimension, which is more balanced than theologians or scientists expressing only a one-sided monorail, biased opinion. So again, I will give you a dual perspective, frowned on by many in lofty close-minded places, to highlight some unusual concepts not allowed to be discussed in universities as they connect with Bible references. I wish we had a forum where science could be freely discussed to exchange ideas without the interference of entrenched atheistic university priesthood forbidding and restricting like in Galileo's time what does not fit their entrenched (evolution) religion, which blinds you to true scientific discovery. My opinions may therefore appear scientifically clouded as I am only a layman philosophically struggling to understand the many environmental problems I no longer can ignore but could cross-reference it with the spiritual dimension the other rail for a balanced answer.

Picture the ancient city of Jericho mentioned in the Bible as a 1300 BC stronghold with fortifications impenetrable to bow and arrow technology. Nobody in their right mind would have guessed what happened next as the city's walls came tumbling down, burying hundreds of Amorites without survivors. The tumbling and collapsing walls of Jericho come to my mind when reading about GMO related magazine articles. A civilization in rebellion like Sodom and Gomorra will not listen to God's final message to a society gone totally corrupt, which allowed food programmed to last for thousand generations, created for humanity, to become extinct. Therefore, as a modern society humanity we will now have to face God's anger again like in Noah's days and experience our fortified walls falling as we ignore the ancient warning us with Satan gloating:

God this time I won! My GMO friends screwed up your world and spoiled it so good that your 1,000 years of prophesied peace and prosperity predicted for the earth is history. It can never happen. Therefore, you Almighty God, became as fallible like us, yet you send many of us unjustly into hell.

Before that happens, wait for God's Answer: 2008-2015

What are GMOs?

In this report looking at a two-rail perspective, I quote plenty of published magazine articles. Follow my path to understand what goes on in our environment and begin to recognize a trend where Agricultural Special Interests of greed, found mostly in American corporations, is grossly misleading the public to keep them comatose as they cover-up what is happening behind your back. To start my investigative report, I will share with you about some genetic science that I learned from

magazine articles. I believe we should reinvestigate the last four E-coli outbreak [December 2006 reported in May 20, 2007], which smells of a perfect cover-up example for uncontrolled **pharmacy genes**⁷ imbedded in modified vegetables, that the Frankenstein GMO industry does not want you to know about.

Based on information fed to them by the self-regulating GMO industry, the media blamed the outbreak on cow viruses from a neighboring feedlot, but they will not tell you that a virus-bacteria tool method used in genetic manipulations could have survived the build-in immune system of a modified vegetable spinach cell. Nor will they explain that perhaps stray pharmacy pollen adapted itself within the vegetable spinach cell wall from nearby experimental crops of another vegetable species. It is just another uncontrolled, next-door, gene-pollen transfer event, which has broken down the original barrier between distinct species' cell walls. Natural design prevented a cross species muddle, GMO technology gets around that, so we end up with modified bees that have killed hundreds of people.

If you do not understand what I am saying yet, let's learn about the danger of gene-splicing. I condense it here for the average person to grasp.

Basically, modern GMOs allow foreign pollens to be accepted within a vegetable species because the naturally intelligent cell immune system has been violated by human scientific techniques. These "advances" in bioscience are producing catastrophic results, causing strange diseases and death to many people and leading to the extinction or permanent disappearance of original, natural seeds.

Just read the above paragraph again. It is just a headline of what I will explain with a simple analogies that I invented for an unaware people who do not understand GMO technology and its consequences to the environment. Stop anybody on the street and ask them, "Have you heard about deadly gene transfers?" Then watch their face of unbelief.

The fundamentals of gene-splicing are not allowed to be taught in universities from the biblical perspective. "Bioethics" are corrupt as a result.

Let me explain complicated gene laws by using analogies even unprofessional people can understand. I compare a living cell or pollen with a laptop computer that most of us have bought or become familiar with. Analogies usually come from fixed historic facts and cannot be massaged or twisted like experts giving a snow job to Washington's senatorial or congressional investigations, such as the ones in March 2007. The senators were mis- and over-informed by the GMO industry to purposely to confuse them. Senators have a difficult time when confronted by special interests and must sort out truth from fiction. Being alerted to the GMO issues, though not a gene professional, I use data from published magazine articles, which is a better source of information. The Senators should have done the same rather inviting the fox into the henhouse to explain GMOs.

But even magazine articles written from a monorail perspective must be crosschecked by applying it with physical laws, which must overlay and conform to the two laws of entropy. So understanding just those two

laws and being familiar with simple laptop computer technology, we can apply it to gene manipulation and its problems to get some results. By comparing the similarities, we can unravel the GMO mystery with these physical laws in nature that God created from the other rail viewpoint. Denying God does not stop the physical laws from performing according to the intelligent design embedded in atomic structures and living cells. We can verify these laws and their operations by physical science.

In this booklet, we will investigate gene transfer from a two-rail perspective. At the end, you should understand a little about the process how it is done and figure out the consequences for yourself. We must always ask about the life threatening "ifs." One can't assume just the positive without researching the possible negative effects on society. That is, if you are a sane and law abiding person. Our GMO scientists have failed to ask the "if" questions and should be criminally prosecuted for screwing up humanity's food. Our civilization is threatened with becoming extinct by causing the death and diseases of so many people.

The Cell as a Computer Analogy

Once we modify a vegetable and its imbedded cell-structure, I discovered that it behaves similar to a computer virus, which eventually will mess up your good software. Your computer bought from the store was programmed with authorized software from the factory, which works flawlessly to your satisfaction. If not satisfied and have a problem, we usually return it to the store and get another one as we expect to buy something working perfect. In genetically controlled nature, we have an overabundance of perfect working computers lying around and only need to pick up another good one if the one we have is not working. Nature has a very efficient system of recycling damaged goods by returning damaged genetic cell-computer goods to predators roaming around like garbage collectors.

Nature's warranty system is always hungry and on the search to remove deficient aberrations that are not performing to factory specifications. Predators eat the weak, sick and defective genetically animals so that only the best members of the species procreate. That is the system as it was originally invented. After thousands of years of factory reproductions, the duck I see on my pond is the same duck Adam saw on his pond because the imperfect and genetically deficient ducks were eaten up. This is why our world is filled with millions of perfectly operating bio-computers after thousands of years. Us happy people just watched the ducks on the pond and never gave it a thought about how it works so well.

Applying this analogy to gene transfer, we can draw parallels and compare the modern scientific technology of modifying genetic material to a computer virus. I read somewhere that the biological agents used by the scientists (viruses and bacteria) have the natural capability of boring a hole into an impenetrable hard cell wall like a machine shop drill. Once inside, the virus can mess up the cell's genetic intelligence code. Scientists cleverly use that penetration ability of a virus to piggyback in specifically selected, foreign genetic/DNA strands to the cell's interior. It becomes a mail carrier with a package attached that enters a forbidden area through naturally impassable cell walls designed by God to

⁷ Dan Ferber, "Something Funny Down on the Pharm," *Popular Science Magazine*, April 2003.

safeguard his creation. Following our laptop computer analogy, when a computer virus bypasses the protective software firewall, it creates havoc with your clean working system once its unauthorized entrance has made it to the inside of the computer's operations or program data where it takes over to use your computer to do its dirty work.

Continuing with our laptop computer analogy with a living cell, go back to the manufacturing factory's starting point – to the plants and vegetables that appear on the third day of creation recorded in the Bible. A cell, like a computer, was originally programmed with embedded antiviral intelligence code, or software, within its cell body structure. The job of this software is to protect the cell's internal data and eliminate any invaders that try to get inside the hardware perimeter. The cell's immune system was designed to kill foreign intruders to protect the species family. Billions of biological agents, like viruses and bacteria, are killed daily; otherwise, most of us would have died by now. As applied to plants and food crops, the natural defenses prevent sexual success with foreign species' pollen so that the procreation of harmful, abnormal seed does not take place.

Similarly, the laptop computer equipped with antivirus protection from the store rejects anything not compatible with it that comes from an unfamiliar, foreign software source. However, if an unauthorized piece of software penetrates the computer's security firewall, which functions like the protective walls of a plant's reproductive cells, then your laptop computer becomes totally useless junk. We throw it out on to the extinction garbage heap and need to go back to the store to repeat the cycle by buying a new computer. In nature, the predator garbage collectors eat the genetically defective (infected) animal that is not up to standard for the procreation of a genetically sound copy/model for the next generation.

How Gene Transfer Works - 1st Law of Entropy

In the case of a gene transfer, when a technician piggybacks foreign (from a different species) genetic material on a virus, he forcefully transfers unnatural, untested, poorly understood and in some manner incompatible genetic material into the nucleus through the back door of the cell wall. Nothing coming through that back door of the cell wall will be recognized as an enemy intruder for some strange reason. The cell's nucleus decides that this foreign genetic material is from the species family and so it is allowed to grow up within the cell. A deadly E-coli bacterium⁸ therefore can be useful in genetic experimentations since they do have a simply structured nucleus.

Let's first understand the normal process of keeping the system operative for thousand of years. This system reminds me of when a person wants to enter a security building. He will at once be confronted at the front desk by a security policeman to check credentials. The security policeman at the front door crosschecks his qualifications with onboard intelligence data stored in the cell library. That data comes from nature's factory-embedded security information like your computer was outfitted with security software. Natural cells have had this kind of security data infused since the third day of creation - before Adam was born.

⁸ Dr. George Church, a genetics professor at Harvard Medical School tells of E-cola bacteria modifying genes.

Front desk screening is the vital first step in a secured process of procreation. Foreign pollens are not admitted into a plant's databanks. No permission is given for them to enter and have sex with the species' heirloom genetic treasures acquired over thousands of years of survival. Entrance is accepted or denied based on matching it with the species family', existing security signatures from of the original factory-creation library as designed by the original inventor of the embedded protection software; therefore, foreign pollens cannot cross-fertilize with another species to produced strange, infertile fruit or seed that does not conform to what was originally programmed. Your laptop computer from the factory works similarly. Its firewall and antiviral software protect the core information operations. Left internally alone, the natural world's genetic control system guarantees that millions of healthy and nutritious baby cells will be born in the future, all belonging to the same species. Most cross-species mixing was prevented by this complex protection system beginning with the security policeman on the front desk. But when someone forces entry through the back door like a criminal, it changes matters significantly, which we will find out next.

Enough of digressions. Let's get back to checking out modern scientist magic tricks. When foreign genes are inserted through a cell's back door into a certain species' control center unchecked because the security process was bypassed, it causes havoc in every aspect of the cell's entire life system. We have now an incidence where cells of one species do not match because they belong biologically to another species; however, once inside a secured command area (the cell's nucleus), these foreign genes can do some horrible damage from inside (like terrorists), which can render any species cell building open to further attack.

Cell Mutations - Second Law of Entropy

Focusing on the inside of a cell, we will notice that the "cell people" of a species family within a secured cell building are usually unconcerned about security issues. They will manufacture other cells or procreate by merging species' natural genetic material with anything that walks around within the secured cell building. They simply do not care and will tolerate new, strange intruders accepting them as belonging to the species family. They trust the security immune killer squad system employed as front door policemen, which conforms to the established rules of the First Law of Entropy that has worked superbly for thousands years, transferring species specific genetic material from one generation to the next. Natural systems make sure that unidentified pollen coming from an unknown source does not enter or have sex so that the integrity of the species family is preserved. That is why your computer worked perfectly as purchased from the factory until it was hit with a virus from the Internet. That was not your choice. You were unaware of its entrance into your data system through an Internet backdoor.

However, if the immune system killer squad is bypassed and not alerted to kill the intruders coming through a drilled back door of a cell wall, that failure to identify a stranger will cause revolution in the cell house computer that will screw up the protection intelligence with devastating results. The cell will move towards self-destructive extinction on

the way toward total “kaput” according to the Second Law of Thermodynamics. If any foreign DNA - not belonging to the species - enters artificially through the otherwise impenetrable backdoor cell wall, it is connected to the cell's life support system and shares the food energy provided. This genetic mixing modifies the plant from inside out, and this is how modified fruits and vegetables are made by modern science.

The same process used by deadly viruses or bacteria to infect otherwise healthy organisms, works well to transfer DNA from one species to another. Of course, it requires the skilled efforts and modern tools of a Frankenstein geneticist, but the reality is that the use of this process results in the destruction of the cell's natural immune system. Later in its developing stage, it will find an opportunity to procreate in a person causing death such as happened to some who ate contaminated California GMO spinach, for example. The cell guards are totally ignorant of the illegal entrance made by a scientist's breach of the back door, so they fail to identify the foreign intruder and do not call out the immune execution squad to do its designed job.

Double Trouble

However modern gene scientists always need dangerous virus-bacteria drills like a deadly E-coli bacterium for penetrating a cell wall to experiment with foreign DNA strands. The penetration risk was too high, leaving open the chance of killing a person who ate that fruit because the virus-bacteria was not killed by the cell immune killer death squad. Once safely inside, the deadly disease organisms keep procreating within the genetically modified fruit or vegetable, which would raise a stormy outcry by the public if they found out about it. Why?

Consequently, a systematic war was instigated by the Frankenstein scientists against the front policemen guarding the species building and his immune executioner death squad friends. He must now be eliminated with his immunity helping friends to do away the nasty thousand-year-old genetic reference databank that has worked since creation to keep hundreds of viruses-bacterium and foreign pollen from penetration. In addition, they needed to eradicate possible virus-bacteria previously useful as tools in the genetic transfer but are no longer needed to mix and match anything in the genetic candy store without causing death.

So the genetic scientists succeeded in splicing out that what contains to the security system eliminating the front desk policemen and his weapon of checking out our modern gene manipulation with other words killed the judge. That process is called “cloning” you can learn more about it on the end of this report reading about a petition against the United States of Food and Drug Administration with 7 organizations of over 50 million people getting scared and now suing.

Now it became easy as seen on educational TV channel [6-21-07], which showed Monsanto's genetic research institution in Africa slicing a little bit of fruit from one vegetable and neatly align it with another slice in a Petri dish. Now combining the easy way, as there no longer exist the nasty policemen on the front desk and his immune execution killer friends sabotaging our new age to come with newly developed

fruit and vegetable. To silence a numbed consciousness of so many employed gene technicians making good salaries, a gospel is preached to them that their work is wonderful because it is providing food for millions of starving people. But management does not mention making excessive profit in the process by eliminating the competition by buying up all seed producing companies in the world with the money they made, or by fraudulent lawsuits against small producers and farmers who try to save their seed. At present they are rapidly screwing up every seed they get their hands on making innumerable natural species extinct. Fortunately, we can still watch an unbiased TV program and have a little more balanced understanding of the mess being created by big, publicly funded corporations.

That TV program showed organic garden and farming developments not needing Frankenstein changed vegetables. True organic farmers planted some newly discovered special plants repelling some secret odor next to bug infested rows showing that bugs and worms can be controlled the natural way increasing tonnage of fruit without the embedded pesticides, herbicides and growth hormones for a larger harvest.

So why do we allow the genetic terrorist Monsanto corporation⁹ to screw up our food genetically and chemically by systemically embedding pesticides in the food we must eat to live. We no longer have a choice in our stores. Maybe we should emigrate to another planet as earth becomes totally polluted with greed by a few American corporations, or we can watch God's wrath end it all as described in my other Babushka books.

Big Time Trouble Brewing!

Monsanto's engineers have now created a bigger problem where pollen of one species arriving at the doorstep of another will no longer be crosschecked at the front desk by the species cell policemen. The scientists have messed with the genetic data banks so that cell security can't examine intruders against a list of friends and enemies. Any foreigners, like deadly bacteria and viruses who want to enter without being cross-examined, can now bypass the original computer data system created uniquely for the purpose of keeping species distinct.

Damaged embedded genetic intelligence of a species is no longer protected from foreign aberrations, which can now have unhindered sex and procreate to produce fruits or vegetables never seen before. That means that any stray dog can now enter and mess up the species kennel of valuable pure breeds. Dangerously poisoned modified pharmacy pollens are now entering good eating fruit and vegetable flower pollination receptacles. They will grow up like a hidden poisoned time bomb producing lethal new seeds not appearing dangerous on the outside, hence is unidentifiable on your vegetable shelf in the market. Just like a pharmacy pollens or pharmacy drugs embedded in eggs that can be reproduced by chickens every time they lay an egg. It seems that each passing month produces another way to kill you slowly without warning through genetically modified foods like the spinach crisis in California.

⁹ Join OCA's Campaign to Mobilize One Million Consumers to End Monsanto's Global Corporate Terrorism, www.organicconsumers.org/monlink.html.

That is the reason why they stick numbers on every vegetable. This makes it possible for lawyers to argue to defend the corporations and the government when death occurs. Because of those stickers, the FDA cannot be sued in court for not applying Federal labeling laws arguing that the laws are un-enforceable to examine every fruit and vegetable, or every egg on the shelf, for embedded poison genes. It is not their fault when poisoned pollens just happen to float by blown by the winds. Not so lucky for you, if you are the one who happened to buy that fruit and eat it with dangerous drugs pharmacy genes imbedded. Modified genes are found in many varieties of vegetables as well as in chickens.

GMOs are possible causes for the massive die-outs of insects such as honeybees. FDA and atheistic university professors are not interested in enforcing the laws on the books. Playing the game of politics for big money gets you elected and employed with prepaid visa cards not traceable. Check out the under-the-table benefits given to senators that have been stored in home freezers. Look at how many congressmen travel round world to receive huge grants, yet the taxpayer pays the bills.

From the gene mixing perspective, it is now easy to mix and match genes to create different variations of bigger fruit and vegetables, but it leaves the door wide open for dangerous virus-bacteria and pharmacy drugs pollen to be embedded, which could kill a person if permitted to procreate in one person and then be passed to another. Worse things will happen. It leaves the door so dangerously wide open that it will not only kill one person at a time like eating spinach seen on TV, **but kill millions people** in the future from eating contaminated vegetables as referenced in Bible prophesy. (Revelation Chapter 6)

Remember the dam just cracked showing a little water indicating a breach in the concrete structure with devastating consequence a little later according to physics and entropy laws. Once pharmacy pollen has been introduced in the environment without a police force immune intelligence system watching for virus-bacteria to prevent its spread, it will take hundreds of years to die out and only in the absences of farmers. Soon everybody will become aware of our criminal Frankenstein GMO scientists secretly screwing up our food supply. All will be educated at the same time to understand the black magic of GMO technology from Satan that is done behind closed laboratory doors. It may be already too late, just as the dam was broken around New Orleans. That city will never recover.

The first sign of a dam's fracture can be noticed on the TV-NEWS coverage that announced the mysterious deaths of people appearing everywhere in every country. Thousands are ailing in hospitals with unknown sicknesses that perplex even the medical profession. Not to mention the massive die-out in the animal kingdom bordering on extinction. These are facts that you can observe for yourself. Let me know if you see a butterfly or even a housefly. My fly swatter hangs on the wall unused for many years. Recent TV coverage has frightened scientists, overcoming their apprehension of losing their jobs to come out to tell the truth as shown at the congressional meeting held in March 2007 that I write about later.

Gene Transfer Technology Applied

To give you a non-professional example, let's imbed a melon gene into an onion to check out what happens. Going through the familiar backdoor, we take along a strand of melon genes that should grow bigger onions. The melon genes added to the modified genetic onion soup might grow an onion as big as a melon and as sweet, depending how concentrated the melon growth genes were.

Check out your vegetable shelf and notice if our gene transfer theory is proven right. You can find onions on the shelf four times as normal onions with a numbered sticker attached for lawyers. Those sweet advertised onions at 1.99 Dollar per pound¹⁰ no longer taste like onions. They have now become flavorless and no longer irritate your eyes, which is normal when you mix in a lot of water melon DNA fused together in the onion melon genetic soup. Market experts will call it "special organic grown Hawaii type" to fool you with a special four times bigger price tag attached. If you want to find out what the extra water in the onion will cost you just compare it to your gasoline prices a gallon multiplied in pound to equal \$16 per gallon onion water if priced at \$1.99 per pound. That's not bad a profit, considering the oil company has to go to much more trouble to get the price you pay at the pump.

Check the second picture I photographed. It shows an elephant onion four feet tall that has grown from one of the tiny green table onions bought from the market some time ago with some roots left on. I planted it in my garden, and you can see that it has now grown as big as a bush.

We should ask the question, "What happened to the virus-bacteria tool used for transferring genetic onion ma-

¹⁰ At FoodVille in San Carlos, CA (25 June 2007)

terial through the unchecked backdoor, which was not detected?" When one out of ten thousand viruses-bacterium may have survived, as TV programs tell us, you get a plant that kill a person eating the vegetable. That small or bigger risk is tolerated by the FDA government as the price for higher water volume fruits and vegetables harvested, which translates in higher profit as it is sold per pound yielding so many dollars per square foot of land.

That is just another way to sell water at a higher price. However, such deception has a price tag attached in the form of sacrificed quality and taste. It becomes a marketing trick like normal beer thinned down with water and packaged in a beautiful colored six-pack labeled Lite-beer. It makes more money compared to a quality concentrated natural brew that is more expensive. Consequently, uncontrolled gene manipulations make more money forced by the need to buy food we no longer have any choice and become a build-in money machine. That new way to make money will continue unabated using the public as a guinea pig, which is cheaper to circumvent to pay the lawyer fees as it will be rationalized when suit for causing death is part of conducting business and charged to the consumer anyway with higher prices. Check out the original potatoes, formerly priced at 25 cents/pound and now advertised at \$1.69 a pound. They have been bleached with gas to make them whiter as the skin is now unnaturally green without it. They also have a numbered sticker in case you get sick. One can no longer make German Klöße, or real potato salad, so all Germans hate you for screwed-up gene potatoes that now fall apart with no starch to hold things together.

More Veiled Trouble!

However, the biggest threat of gene splicing lies where the antiviral intelligence program embedded within a cell is altered. Please notice that neither the FDA government officials nor the special Frankenstein interests will tell you that every cell violated by a strange unidentifiable foreign DNA codes from other organisms mixed together, lack the organized and well-fitted intelligence required for survival, so it becomes a deadly enemy to its own species. For example, scientists have managed to put many pharmacy chemical formulas¹¹ of potent heart or kidney drugs into vegetable¹² seeds or hens that lay pharmacy eggs¹³.

Consequently, those drugs can be extracted more cheaply after the fruit has grown and converted into cheap pills, which sell at 100,000 times profit. Checking out my heart conditioned prescribed pills from the pharmacy store I must now eat every day and getting in the process another heart attack finding out the sticker price of \$3 per pill and need ten others daily to live a little longer after my operation. That is a whopping fortune taken out from my retirement. The senators do not care one hoot about it because the pharmacy industry pays them to protect them with legislation. It is like helping organized crime.

¹² *Weird Science: The Brave New World of Genetic Engineering*, biap.vt.edu/cfieldtests/cfm.

¹³ C. Brownlee, "Golden Eggs, engineered hens lay drugs." *Science News*, January 2007, www.sciencenews.org.

We know that every flower producing seed has two sex organs surrounded with inducements offered for bees to pollinate for free like color and fragrance odor contraption to attract slave bees to do some pollen transfer work with nectar as a payoff. The bees also wind and rain becomes carrier of pollen, which transfer a package like a sperm for the other flower waiting to fertilize an egg and make complete a cycle for creating an offspring's of the same kind we recognize as seed or fruit.

However, when an intelligence altered immune system receives a computer virus damaged information pollen, then Humpty Dumpty will fall off the wall and can never be repaired forever. The altered pharmacy pollen carried by the bees is imbedded now into another foreign sex organ of another species no longer checked out or rejected and protected by a front policeman desk or analogue to my antivirus software in my computer. It enters smoothly like Internet virus information into an unprotected computer with devastating results. In the future, you will eat strange vegetables never seen before, which will grow naturally and be sold as organic.

Creation of Franken Fruits?

Allow me to give two examples to understand what is already happening in nature. Let's take a corn plant with modified pollen that now has a damaged immune system. Those GMOs are transferred by the bees with one bee later searching around a pear tree to collect the nectar of a pear flower. The damaged genetic information can now be passed on genetic altered information from modified corn pollen stuck on bees belly can now be accepted by the host pear tree flower sex organ.

The modified pollen unchecked by a confused or absent policeman no longer checking against original creation data information disappeared and cannot find it as it was just modified by Frankenstein gene technician as that combination data no longer exist, will now enter the pear flower unhindered in its sex opening receptacles to reproduce an ugly pear-corn fruit grown on trees.

In a worse case scenario acceptance of screwed up pollen is possible now embedded with a pharmacy chemical gene formula implanted of a heart drug never to be eaten by a healthy person as that data in the cell library never existed before and therefore the immune execution tasks force could not kill it. The new cell information not check out by an front desk policeman examine now becomes a poison and works against originally embedded intelligence data since creation and will accepted by the new mixed genes cell and thinks it is coming from original species family, but here is the kicker lacks the intelligence protection data, which was modified by an evil foreigners coming through the back window.

I am not a geneticist and reading this may seem preposterous but explain to me why I see on my pear tree some branches growing indescribable horrible looking fruit I cannot describe. I worked on a ranch and have a garden with many fruit tress for 60 years and have never seen such aberration fruit ever if you could call it fruit and invite you next season on my ranch to check it out. It is scary to think if every orchard trees would now grow sick looking aberrations never existed

before along natural looking fruit to the next branches of familiar pear tree. The better looking fruit is sold in the market to notice check it out like an apple-pear or is it pear-apple fruit at twice the price?

I can only explain what I see on my pear tree that the pollen immune cell wall was damaged by genetic manipulation with a violated prevention system like an antivirus software in your computer no longer rejects a foreign pollen, which previously never could have crossed a species barrier but now can unhindered without protection cross combine with another species and will create havoc in our food supply, which has existed for thousands of years in our world unchanged. A damaged antivirus system no longer recognizes what was original created and a foreign invader entering and checking it out against a list and comparing stored information since creation thinking it is their own.

That scenario is not understood by evolution fairytale believing scientist because erroneously they assume that cells can evolve with a reproductive intelligent system set-up of over hundred percent violating the entropy laws they think must selectively exist especially for them and believe against the law of physics can be bypassed because they want to make more money.

Watch out for many new invented and distorted larger fruit for sale on your vegetable counter soon coming never seen before. But a greater horrendous problem was created by genetic manipulation that a modified cell cannot distinguish between uncontaminated original to pharmacy manipulated gene pollen, which are therefore transferable to other original pure vegetable in surrounding areas destroying original seeds. Soon we will no longer find original seed, which have become extinct as only contaminated modified seed is propagated with deadly pharmacy genes imbedded and people will be dieing like flies from implanted uncontrolled pharmacy gene drugs no longer eliminated by the immune killer squad deadly pollen flying with the wind and weather contaminating all of nature with lethal consequences. Just think.

Modified (pharmacy) eggs have already been sold in the market without the public knowing what was embedded in them. The news recently blamed contamination of the eggs, but the government collected 300,000 chickens from many families who were not even commercially producing eggs.

Read God's answer in Revelation about what will happen to a civilization that allows such evil to be perpetrated. Pay attention to the selected magazine articles, and think about what you read with a two-rail perspective.

Now let's read some magazine articles and learn about science and religion rejected by ignorant rebellious monorail Frankenstein scientist believing in evolution religion fairy tales. I will use headings to help you find the contents should you want to show it to your friends. Since I mentioned about bees, one more story about them will hopefully increase your understanding about gene transfer, then there is more about vegetable modifications later.

Honey Bees Disappearing Alarm!¹⁴

Bees pollinate agricultural crops from many fruits and nuts to the mainstay vegetables we take for granted. Almost everything is threatened if the bees disappear, which will open the gates for the pale green horse rider to come with the balance in his hand as prophesied in Revelation chapter 6. Mankind will wake up when food prices go through the roof. Most will not survive. Extinction caused by gene manipulators will run its course as the apocalypse prophesied is ready to appear. Check it out with some recent magazine articles and compare it with other magazine stories later mentioned to evaluate how late it is on world destruction apocalypse clock.

Realize that dangerous scientific experimentation with nature will usually fail to the detriment of the environment. For example, the modified killer bees let lose accidentally in South America now kill hundreds of people every year from South America to Texas. Now comes the news that since October 2006, beekeepers in 27 states from California to Florida are on the edge of business collapse. Once again the focus is on genetically altered bees, which seem to disappear *en masse*. Once again, public relations spokesmen try to blame a virus. We have heard this excuse before in the spinach cover-up fiasco. Regarding the bees, some airheads blamed their disappearance on paras

itic mites, chemical fungus and even raising the question of radiation in mobile phones – some of the most baseless theories ever to come from brain-dead science. By now we should know the difference. Don't be deceived by special interest meetings on Capitol Hill that interjected red herring misinformation in March 2007. Don't be confused by that purposeful, clever disinformation by so-called experts with a PhD degrees who successfully misled senators. But do listen to what was stated at the end of that senate committee investigation by an honest scientist, "If bees disappear, humanity will follow four years later as massive amounts of crops will not be pollinated."

Living on a ranch in California, I feed humming birds. Last year (2006), I regularly counted 50 birds fighting to get at the sugar water cocktail before evening sunset. This year (2007), they seem to have totally disappeared. I suspect that they have been eating nectar from gene-contaminated flowers, and the hummingbirds have disappeared along with the butterflies. Have you even seen ordinary houseflies lately? Have they become already extinct by the same evil perpetrated by greedy American global corporations covered up by the FDA that lies to senators?

Bee Colony Collapse Disorder

When big money is threatened, only then do we hear about the rapid and inexplicable die-off and disappearance of honeybees. It sends shudders down the 15 billion dollar agricultural industry connected with pollination. A congressional hearing was held in March 2007 to explore the reasons for Colony Collapse Disorder, as the syndrome is dubbed now, as well as how it threatens America's agricultural vitality. Scientists are at loss and cannot explain the disap-

¹⁴ Across the country honeybees are vanishing. What will farmers do if the buzzing stops? By Josie Glausiusz. **Discovery Magazine**, June 2007. E-mail: DiscoverReprints@parsiintl.com

pearance of honeybees. Wild theories from monorail experts muddy the water, and the article concluded that nobody knows exactly why. A French ecotoxicologist, Axel Decourtye, is getting closer by looking into chemical causes. He focuses on insecticides like neonicotinoids and imidacloprids, but we should look deeper into how those insecticides are systemically imbedded into cell structures.

Let's look at what I found out reading magazine stories to get another view at the problem from a two-rail perspective. Within the cell's body we can think that there exist various arteries to flow into outlets some producing nectar, others sex hormones or special odors for initiating sex to provide for the next generation. In nature, the plants often need to attract some mail carriers to help in the pollination process such as bees, butterflies or other insects, which will transfer the DNA information held in the package we call pollen.

Pollens are made of amino acids, which are the building blocks of protein possessing built-in intelligence information only matching a certain species. Just like your car key only matches your car to get it started. Therefore, most pollen will travel by wind or bee carriers via the male plants over to the female plants. Originally, nature was very diversified. Before birds and fish were created on the fifth day, as reported in Genesis, wind distributed the pollen as it came from plants whose flowers manufactured light pollen (usually no nectar) such as grasses, corn, oats and conifers (pines). When food was created for humanity, pollen became heavier with more intelligence and required mail carrier help like bees, which were created later.

However, genetically modified pollen with damaged antivirus intelligence information of a gene tailored cell, works like a laptop computer virus, which now becomes toxic to the environment of the whole system. Do not send a friendly E-mail message to your friend with a virus imbedded in your computer as it will destroy your friend's computer too. A genetically modified cell with misfired safety regulation intelligence is passed on through the bees digest system eating genetic contaminated nectar, which is converted by the bee excreting damaged lethal gene structured honey stored in hives. Remember the honey is now deficient and lacks the original antivirus information embedded in the cell nucleus and therefore has become fatal to many insects perhaps even man if you eat too much of it, which formally was good food. The system now collapses with a domino effect on its surrounding environment as other species are all connected one existing on top of the other and depending on each other to share what nature provides. Cause and effect laws are now upset with humanity. The consequences follow as predicted thousands of years ago in Revelation 6's prophecy of the green pale rider coming with guaranteed death to people as bees and birds do today.

I will explain it again because it is the crux of the problem in GMO process. At the cell level, pollen DNA is checked out by a policeman intelligence program on the front door previously explained within the cell environment. What came in through the backdoor injected by Frankenstein technicians genetics is also accepted like belonging to the cell species family but is lacking the protection intelligence information, which was spliced out by gene technology and would have been rejected on the cell level by the front door desk policeman. When a gene

strand package arrives from unknown species, the police on the front door are checking the DNA records for a match in the databank. If that strange gene strands does not match previous acceptable stored original information will usually be rejected as a foreign intruder according to the entropy laws and call in the immune extermination squad responding for protecting of the local species family community to do their assigned jobs. However, what came through the back door is like analogue an infested virus program in our laptop computer.

So coming through the genetic backdoor manipulated by scientists will not interfere with the operation of the cell because it got away from the selective process to be checked out for strange unrecognizable intelligence information data not belonging to the species family. It will be left alone to mix with other cells and is not killed by the immune death squad. But that foreign DNA strand will now take advantage and multiply as the cell is duped to think it belongs to the same species family but now grows differently into another direction. The previously good food becomes now genetically poisoned lacking the control mechanism to counter foreigners and eliminate what is lethal to the system what does not belong and death now occurs for the total system according to the Second Law of Thermodynamic just like your new virus messes up your clean laptop computer bought from the store now becomes junk if connected to an E-mail transmitted virus coming through the backdoor. Or analogue your sick duck is eaten by the garbage collector never to procreate or your honey bees no longer slave away so that we may eat fruit and vegetable to live another day. Please tell the FDA and GMO scientists to cut off the branch you sit on and watch the effect of being stupid.

In my opinion, corporate special interests are the biggest criminals ever - surpassing Hitler and Stalin, as they will be responsible starving billions people in the near future. I see the proof in my neighborhood, or explain the absence of humming birds and many insects that I no longer can observe. They all eat the same genetically damaged food like the nectar lacking the antivirus software in their cell computer environment. Senators and scientists are perplexed because they don't live on a ranch and wonder why we observe such massive bee death. They miss the simple logic to ask what they have been eating, and they do not look at the DNA cell structure level.

Just observing life around my vineyard pond, I noticed big changes of its mini-environment. No longer hearing crickets and bull frog in the evening and the absence of catfish and swallows no longer hunting for surface insects as bats in the barn have disappeared, I wondered of why in this spring 2007 so much of dusty pollen is covering the pond like a carpet. I expected like in previous years a massive algae growth, which must be removed to keep the intake water pipe from clogging to irrigate the vineyard. Now later to discover no algae growth at all as the water for mysterious reason is crystal clear from the green algae cover having disappeared costing labor on the ranch to remove it.

The pollen dust seems to be culprit now has poisoned the pond environment with genetically modified pollen becoming deadly to its surroundings with modified the algae growth. But just in time, I read again in **Popular Science Magazine** telling of modified algae's valuable use to America in converting it to bio-fuel to make us independent from

the Arabs¹⁵ oil price oppression. But what was not mentioned like a genie out from the bottle the danger if those modified algae species should leave the protective tank environment producing diesel oil for you oversized RV car and appear in our waterways around the US or the world? A thought too horrible to contemplate, being reminded of killer bees fiasco and worry of another disaster looming on the genetic monster sky, like black clouds announcing a storm similar to New Orleans' destruction.

Getting back to honey and bees disappearing is analogous to scientists playing around with genes like a bull in a china store, which do a lot of damage in the environment without first knowing and understanding its secrets. Now thousands of hives boxes are empty of life but still full of cell intelligence modified honey left behind. Monorail educated scientist baffled cannot understand why other wild bees and other insects always looking for a free meal never touch the honey stored in those dead hives? All we can do with left over honey in the dead hives sell it to a comatose public with a nice label marked "organic grown" and make some money while there is still some honey left to sell. Hopefully, you will not die from it like humming birds, which have a smaller body looking at weight to size ratio like other insect I no longer see eating honey nectar either.

It seems that bees are smarter than our university-educated scientist in front of influential senators who are paid off by hiding illegal money wrapped in aluminum foil in their home freezer or others getting it from offshore bank accounts transferred by special interest. Some senators are now so brazenly seen on TV in June 2007 to take off with family and friends to famous \$10,000 a day hotel resorts on government luxury jets all paid expenses to a whopping \$120,000 for a so called three-hour conference meeting during a four-day junket paid by the comatose, not caring taxpayer. I would be ashamed as a trusted representative of the people to send in the bills and sign my name belonging to privileged senator club with prepaid unlimited visa card paid by a generous obese pork government and that is why I am not a senator.

The greedy scientists, like a bull in the china store, should have kept gene research in the laboratory and not modified all our food now sold in our food store with a sticker marked accepted by the FDA to protect his Bahamas offshore bank account. Genetic research by itself is not evil but atheistic scientists possessed by Satan are driven to destroy God's creation headed now for extinctions. Satan from the beginning wanted to demolish God's creation looking back in history remember Noah and demonically indwells people to teach them his rebellion to become tools of destruction.

If you think that I am a religious fanatic gone amok then please check out the latest gene research of deadly virus and bacteria collected in thousand newly assembled bombs stored recently in the American military arsenal to kill all life on earth a hundred times over and costing billions of your tax money. The newest most deadly gene bio-bomb material came from

¹⁵ Algae Power with Bioboost, The Fuel Cell- Your are looking for clean fuel that grows anywhere, needs only sunlight and water, and could produce enough oil to free the US from petroleum addiction? **Popular Science**, August 2007, 32 Hot Products – Facts in algae can be made into biodiesel, a renewable substitute for diesel fuel. popsci.com/customerservice.

recently dug up graves from the Middle Age scourge and extracted DNA of deadly virus's human remains buried by the millions who died in the plagues. They have now genetically resurrected the deadliest virus ever modified to be come more deadly and mass produced it for the new bio bombs multiplied in sealed containers and stored for later use.

How evil can you get in genetic manipulation to modify ancient deadly diseases resurrected from the grave to become more poisonous to be used against humanity with modern method of distribution to be more effective? Read what is recorded in the Bible terrible to copy in this report what will happen in about 2015 [Zechariah 14:12] not too far off in the future looking like a modern gene disease well known by science with a genetic cell intelligence altered GMO made more potent. Horror of horrors think if perhaps reading what is documented in the Bible came from humanity reengineered flesh-eating bacteria without antidotes from the Middle-Age death camp resurrected in our gene laboratories **and gets embedded into our modified vegetables without being rejected by a front desk policemen**. Then perhaps you will understand my introduction of this Babushka Genetic book.

The bottom line spells out that governments and consumers need to become educated and informed to control the criminal genetics scientist hiding behind a corporate curtain exterminating our food grown for thousands of years and with it our animal world! And if you only worry about your body and health, you the consumer should demand that our government tell the truth and do their job in the interest of the public safety rather than ignore when people get sick or not even be alarmed at the many business failures needlessly suffered by organic farmers, which now worry about pollination.

I hope some would read and understand between the lines of my collected magazine report and forget the experts giving a snow job to those who signs the checks for another government consulting contract ending in the offshore Bahamas bank accounts. When food becomes 10 times more expensive than we will notice the Bible prophecy pale green rider has arrived, only then we will we discern that we violated God and made him angry and deny existing, worse replace him with a children evolution stories told in our schools that a frog becomes a handsome prince if kissed by a genetic educated scientist.

Check out the monkey evolution fairytale only painted for lack of evidence on many museum walls not matching fossil facts. If we as a society keep insulting the creator for so many years and think we could get away with genetic crimes committed against him and humanity then watch out and read apocalypse prophesied and find out what will happen. Observe, therefore, this modern Jonah's latest date announced 21 December 2008 and find out why it aligns with scientific projection four years later as stated at that congressional meeting on Capitol Hill March 2007 and count the years from honest scientist foretold when bees die we will follow four years later and also counting the time from disappearing bees to match the 666 cycle clock of the apocalypse Hebrew Alphabet number system you can learn about reading the other Babushka books.

Investigate Spinach E.coli Outbreaks

The public ignoring a recent December 2006 food contamination outbreak in California of a huge spinach field quarantined as later was found out strange unknown indefinable diseases many people died from with explanations that it came from nearby feedlot and in addition to all these chemical ingredients absorbed not mentioned blamed it on the deadly E-coli bacteria allegedly coming from nearby cows. We are too dumb to know about GMO technologies and the factories who produce this horrible Frankenstein food will not tell you as they are married in a satanic unholy union with our own government the FDA, which supports this unhealthy screwed up food, as big money flows in the government pension funds and reelect our corrupted senators and congressman. Here is an update six months later in April 2007 to what has occurred since watching the news on TV about what is further happening in our genetic Frankenstein world¹⁶:

Finally, after three month out break of E-coli #0157 CNN aired a TV program (5-20-07) with the headline:

Danger Poisoned Food Eating Vegetables

I would give the program another headline, "How to pacify people not to question the Special Interest Corporations producing GMO vegetable when people get sick or die." The program showed the county and university specialist crawling all over testing the water, soil, equipment and looked up the hill in the far distant seeing cows. They checked out the farm hands that must wear masks and gloves in the fields, inspected the excellent toilet facilities with special soaps clean water and towels and searched for hundred legal special laws violation on the books a grower must keep records to avoid expensive lawyers.

This is a typical damage control publicity stunt like a red herring distracting a hunting dog on a path to get you off the immoral trail. Then to make you feel sympathetic interviewed a family with a four year old sick little girl needing a kidney transplant in the future, which was then followed by people suing the packagers in court for eight death of eating spinach to get even, with over 230 cases recorded in over 26 States of infested vegetable.

To top it up mentioned twenty other outbreaks by now forgotten since 1995 and the Center of Safety Department lamenting and remarked –"sorry the system is broke and does not do their job". Then they mentioned that the laws mostly are depending on voluntary compliance.

However what was not mention and is the real reason why they would grow bigger vegetables at a faster rate like spinach twice the size to achieve the lofty goals of higher profit. They forgot to mentioning that GMO veggies' are now bigger, tasteless and containing unusually more water, are mixed and matched with animal and vegetable genes imbedded with systemic pesticide, herbicide, growth hormones added color and most of all could have contained survived virus-bacteria used as a tool for making the modifying GMO process possible the public knows nothing about.

¹⁶ "Seeds of Doubt, Part 5," by Rick Rodriguez, Executive Editor, **Sacramento Bee**, California. Five part series originally published June 6-10, 2004

Twinkies

Closing the program mentioned and now forgotten a peanut butter - mushroom fiasco, 60 million pet foods recalls with alleged 16 dead pets but estimate in the thousand. The little girl's mother bewildered searching the vegetable shelf's for food her little girl can no longer tolerate to eat. Desperately and frustrated cried out and said: What can we eat? Twinkies?

Not knowing that Twinkies according to Discover Magazine I came across reading and telling us about artificial butter tastes, which comes from a chemical "Diacetyl", which is manufactured in an obscure Chinese chemical companies and a well-known German multinational corporation and always labeled "harmful if swallowed" both ironic and ominous for a food ingredient not controlled by the FDR. Will it stop the big conglomerate to add it to food like Twinkies even if it is shipped with big letters on the container, "**Dangerous poison-Do not eat.**"

Certified Wine Tasting

Chardonnay wine is mentioned in the **Discover Magazine** and using artificial butter "Diacetyl" embedded in Twinkies¹⁷ to give that special butter taste. I noticed mention that the same chemicals a mere touch of a drop in a bottle of wine it would also enhance Chardonnay wine with smoothness slippery butterscotch flavor a notch higher. So small amounts of this chemical can be detected with a spectral analyzer instrument. The artificial substance "Diacetyl" is related to acetic acid, an acetylene welding gas so powerful bad smelling that some companies that deal with it do so in dedicated separate buildings. The "Di" in the name refers to its molecular structure and the "acetyl" part shows it is related to poisoned acetic acid. To prove my point at a recent wine-testing event a two-buck chuck wine made it to the top to get the gold metal price as the best tasting wine produced in 2007.

That news has concerned me as I grow grapes too. My retirement funds were invested in a modest vineyard, and I am fearful now of losing my investment due to these unmanaged GMO issues. Just this week I witnesses a major wine tasting event put on by California's leading wine producers. A board of distinguished judges tasted dozens of wines with expensive labels to award a gold medal to the winner. In restaurants, a glass of wine is 6-10 dollars. This is too high for every day drinking, but is OK for a special occasion if one can afford it. As a former scientist still reading technical magazines, I have some concerns I want to pass along to you. Every Olympic athlete and professional sports player is tested with a spectral analyzer for drugs in order to compete. We should do the same for wine judging. In other words, wines should be spectrally analyzed to be free of chemical additives like Twinkies "Diacetyl" or glycol (anti-freeze) found in Austrian wines some years ago in order to qualify for county competitions.

Let human judges make the final determination of taste excellence, but let the county guarantee a level playing field. I think it is obvious how

¹⁷ From "Twinkie Deconstructed," by Steve Ettlinger, **Discovery Magazine** 2007-book excerpt, *Cooking with Chemistry*, page 66.

something like that could give an unfair advantage to a mediocre quality wine. In fact, I suggest that we go all the way and require the listing of all unnatural additives on wine labels as well as state whether the wines are GMO free. Frankly, I think all of the food sold in supermarkets should be required to state whether they contain GMOs or not. Consequently my suggestions would be first to analyze all wine for testing to pass a profile test with the spectral analyzer to identify the chemical food-color-taste additive or drugs just like we do it to our athletes. That would tell us the difference between a two buck chuck and classic wine. So why not get all the way and tell us on the label what chemicals and GMO structure is embedded in our food sold in supermarkets?

The Spinach investigation broadcast ended with another food safety option by showing vegetables radiated with nuclear bomb material to kill off all living microbes or bacteria to make it safe as an alternate choice. Typical to mislead you and the public showed a person eating radiated and non radiated salad. Then asked the question dutifully answered for morons.

Quote: I do not taste any difference! How about conducting a radiation test, and using a spectral analyzer investigating DNA damage and so many other cell aberrations with specialized computer equipment? What would an animal-vegetable gene look like after the exposure to radiation and give the public the result of experimental rats tested first rather showing a man eating and asking can he taste the difference?

Taste Bud Manipulation

Talking about taste buds and the latest in our chemical wonderland world one more article¹⁸ will inform us what is coming soon. I will quote a few sentences well expressed: "The tongue is home to more than 10,000 taste buds, each buds consists of a bundle of cells that detect chemical food and drink. New flavor enhancers bind to these cells to magnify the brain's perception of taste, such as sweet and salty. This effect will enable manufacturers to reduce sugar and sodium in their products without compromising flavor."

A good sales pitch is made up of something good for you to cover up the real purpose like how to take your money without you knowing it. To sum up the article designed to fool you comes in another variant of what we eat as they patented a new approach of engineered artificial flavors to chemically modify your taste buds with artificial induced chemicals to fool your taste receptors. Special chemicals on contact with your tongue bind the receptor with a chemical layer, which transmits to the brain an interpretation that it is eating as wonderful particular food even if it is garbage. Therefore any food can be laced to taste for instance like cream similar to ice cream but totally is not cream in substance of an individual flavor. Is it synthetic flavor from the chemist invented and patented to taste like normal grown food? In closing the article mentioned that we're not limited to artificial ingredients and certainly don't have a project aiming at completely synthetic food. Really, not yet perhaps as other corporation will?

¹⁸ Popular Science, August 8, 2007, Fighting Bad Taste: Food scientist Mark Zoller is engineering chemicals that can fool Americans into eating healthier.

I don't believe what I read promised as one thing is certain that some will take off from that new science and make artificial food controlling your taste buds. Your brain tongue receptors are now fooled and will interpret a certain taste by comparing it with the programmed original taste data stored and embedded in your brain memory since your childhood to recognize good food if you are a person over 50 year old. The new generations already used to junk food additives no longer know what grandmas real Jewish chicken soup tasted as chickens have been modified no longer taste chicken as grandma died always complaining if you remember it. Now it is getting worse being duped to accept inferior junk food or artificial food to taste like the original if you are old enough to remember the good old uncomplicated days as the brain cannot delineate what it senses.

Soon we will have forgotten what original vegetable-meat tasted like being fed chemicals from chemists and no longer know the difference between artificial foods produced. As GMO food looses their flavors, some chemist sure must now come to rescue and compensate what was lost. Please keep reading the other magazine article I collected to make you more educated or perhaps get that sick tasteless feeling. Something is wrong in this modern plastic world now accepting tasting junk and like it. Huxley's brave new world has arrived.

GMO Contaminated Food - Crime of the Century

It is outright criminal to perpetrate a lie by selling fruits and vegetables not labeled or tested for safety, as applied to humans, first. The abused mentioned in my letter combine to create a massive conspiracy against humanity that is fast becoming the crime of the century that will lead to the destruction of our civilization.

Since the beginning of the 21st Century, we again reached the technical ability to change God's original design. Looking from the scientific aspect, humanity is not far from permanently and totally damaging God's creation through genetic manipulation - just like it was before the flood of Noah. Believe it or not, most vegetables have already been 95% genetically altered for the worse. It is highly possible that the original seed varieties will become extinct within the next 10 years as many already have.

Agribusiness corporations freely mix vegetable and animals genes indiscriminately like fish genes in tomatoes. This practice will permanently change natural gene structures around the globe until all original seeds are destroyed forever. True to the original oracle's contract, God will again send an asteroid like in Noah's time. He will do so in order to curtail man's Frankensteinian madness. The event that will end this insanity is called the Apocalypse. I stumbled on 2008-2015 as the years of its duration and wrote two books to explain my discovery and methods of analysis and cross checking. It is for you to prove it for yourself.

After the Spinach TV show avoiding mentioning the real reason of GMO changes in our food, I remembered another broadcast coverage reported on TV coming from China.

Numbered Fruits and Vegetables¹⁹

Do not simply believe what I write here. Check out genetic research reports I referenced that are printed by honest scientists warning us of the known and unknown risks of GMOs. Then compare it with what you find displayed in your neighborhood supermarket both vegetables and meats. Notice that every vegetable and fruit is now identified with labeled number. Why?

The only logical conclusion is that these numbers are there to defend sellers against lawsuits when someone gets sick or dies from eating genetically modified agricultural products. We need to label embedded foreign genes and chemicals like all additives and ingredients are listed on the labels of baked goods or cans of processed food according to Federal law. The agriculture industry does not want to tell us the genetic composition of what they produce because they fear the outcries by consumers. But will send a lawyer immediately if found even one patented gene in your fruit or vegetable pad and asked for a license fee. The lowest fee is \$3,500 Dollars for one gene of many, which is cheaper to pay up then spend it defending it in court²⁰.

My question is; have our GMO food products been adequately tested on generations of laboratory rats before selling it to the public? What about the genetically imbedded pesticides, herbicides, growth hormones, antibiotics and the host of flavoring or color-enhancing chemicals? Should the public be the guinea pigs or laboratory rats?

It seems that it must be cheaper to pay off legal fees to defend against the lawsuits of sick or dead persons rather testing a harvest for all imbedded chemicals and foreign genes. Am I the only voice in the wilderness among so many honest scientists? I don't think so, and I don't make up these concerns. I share them as I read about it in magazines.

Taco corn soybeans

Another outbreak of death and disease coming from China was reported on TV [4-24-07]. It was again traced back to American produced seed with GMO contaminated corn and soybeans and/or other animal feed. Now so-called special interest experts are trying to figure out how widespread that contamination is. This latest headline follows on the heels of other outbreaks like recent deaths attributed to contaminated spinach we discussed above. California is a hotbed of GMO produced food products to the point that other states have banned the products of some huge pork producers until a remedy is found.

Remember the contaminated Taco Bell corn products two years ago? On page 205 of my first book I mentioned a company called ProdiGene produced "Pharm corn" that contaminated a soybean silo. Tony Laos, CEO of ProdiGene, signed an out-of-court settlement between his company and the USDA in, which he agreed to undergo a stricter agency oversight, to pay \$250,000 fine and to buy back 500,000 bushels of contaminated soybeans from the co-op. Then I heard after that reported

¹⁹ GE Food Alert report, "Weird Science: The Brave New World of Genetic Engineering," www.nbiap.vt.edu/cf-docs/fieldtestsl.cfm, EarthSave magazine, Spring 2002.

²⁰ Percy Schmeiser lost his seed grower business through GMO contamination by neighboring fields, e-mail Roundvalley@saber.net 2-14-04.

about cat food sold to China connected with deaths of mysterious brain diseases even turn up all the way in Canada. Could it be connected with contaminated GMO modified grain from America?

I am sure that nobody will be charged with criminal neglect even though some rich people in China eat cats in fancy restaurants. I usually discover that when polluted grain or food is identified in this country will be cheaply sold to China rather then disposed of. Once in China, these contaminated products cannot be tracked due to its massive population four times bigger then the US. Our government controlled by special interest is like asking the fox to watch the henhouse. After that came the NEWS especially in California the hotbed of GMO and other states quarantined some huge pork producers until a remedy is found (May2007) with identical cat food contamination syndrome causing death.

Apples

Recently, my wife threw away an apple. I looked in the wastebasket to discover the reason why a good-looking apple was thrown out. I discovered an irregular red colored shape within the white flesh and wondered if it contained pharmacy genes I should not eat. Carefully tasting it reminded me of strawberries.

Then I found a fruit from the crossbreeding of apples with pears in the supermarket. I will not buy it having checked out some magazine articles. Read some of the scientific journals and become informed of the Frankenstein foods we are now creating never seen before on the vegetable shelf in the market. I ask, "Why fish genes in tomatoes? What could be its purpose?"

Chicken

I could get on unendingly with recent News coverage around the world, which did not report the cause of the bird virus influence's, SARS, mad cow diseases or suppressed outbreaks of bovine spongiform encephalopathy and now infected elk-dear population in Canada and million chickens²¹ destroyed from poor farmers by the government. Why destroy 300,000 birds in one area in Asia, a third world countries not being controlled by a health department? Where they contaminated with pharmacy drugs raised from eggs without the population knowing it? The government failed

to tell the reason.

Quote: "The Scottish scientist has genetically engineered hens that can not only produce useful drugs in their eggs but also reliable pass on this characteristic to new generation of chickens!" And quoting another Frankenstein scientist from Laval University: "You could perhaps change the flavor [eggs] or add something interesting for health." Are you volunteering for his experiments? How many more chickens will be destroyed by the government and forceful removed from poor farmers in the future? These occurrences are the result created by scientist ²¹ Golden Eggs, engineered hens lay drugs, by C. Brownlee. Science News, January 2007, www.sciencenews.org.

as they failed to put adequate controls on their experiments, like the killer bees let loose and now reported honeybees disappearing at an alarming rate.

Will they follow the frogs and now even flies I no longer see? We should think that they would first test the seeds before they sell it as food in the market with dangerous complex chemicals embedded and find the deadly pharmacies genes accidental transferred by modified pollens carried and implanted by wind and weather in grain food and now even **worry about eating eggs and chicken contaminated with pharmacy drugs** we cannot even taste or see? Are we totally gone crazy to allow those scientists to poison us and let them walk around to sell their products without FDA approval, rather locking them up as criminals? The wild and domestic animals die now in nature on a massive scale. Are we next? Would that mean profit loss, which is usually passed on to penalize an ignorant consumer rather the CEOs of gene corporations?

If I were a beef rancher and wondered about a declining market I would become educated in modified beef before the public backlash accelerates to a total decline of beef in America. In Californian, the hotbed of GMO, ignorant cattle ranchers increasingly becomes frustrated and cannot understand why export to Asia, chiefly Japan, South Korea and Europe is hindered as cattle ranchers share concerns about slipping markets.

Modified Beef

President Bush speech on May 24, 2007 fully aware of the beef industry problem spoke about the trade deficit imbalance with China and wanted to encourage the Chinese to buy beef from America to help balance the budget. Why would he sell beef to foreigners when I, as an American, stopped buying beef because it is no longer beef? If we would produce good beef, we would have people standing in line to get it. Or I would not have to fly to Mexico occasionally to get a good steak. This is just another reason to observe why the Europeans, Chinese and Japanese will not buy our beef from America even if President Bush would plead on his knees to enhance the government payment balance deficit. I rather think it was a pitch for the beef industries' special interest, which would not have a problem selling beef if there were still some original cows left around with white fat as red fat you can check out the meat counter will not taste beef to me. It becomes lately too expensive for me to go to Mexico for a good steak no longer available in my country.

Let's explain a few more facts you as the consumer can identify with to convince even a skeptic and I would advice my fellow farmers to pay attention why we have a declining beef market. If you asked a small farmer, usually ignorant about GMO, will show you with pride a fantastic good looking stately bull for his herd with promises of big dollar return? But what are the facts you can read in my Ag-Alert weekly newspaper California Agriculture. January 31, 2007²² stating big worries in a declining beef market as consumer becomes more educated, avoiding beef with red fat no longer tasting beef especially if you are a Jew eating unclean animals genes imbedded and think it is kosher.

²² AgAlert newspaper for California Agriculture January 31,2007. issn 0161-5408, www.cbf.com.

Here are few examples where the beef industry is heading:

GMO science can now embed dead meat from other animal species in a cloned cow²³ FDA approved, which will alter its flavor when you taste its meat. Cloned cows? Slimy dead alligator meat particles imbedded, which will change the taste of beef? How about a skunk meat to make it smell interesting? Have these scientists totally become insane and still get paid government sponsored salaries in the universities rather locking them up in an institution for the mentally challenged? Did they eat too many "Di-acetyl" Twinkies?

Reading another magazine shocked me to my bones describing artificial factory-grown meat becomes now fast-food reality. Giant sheets of grayish meat²⁴ cells grown synthetically in factory racks using pig stem cells with Omega-3 fatty acids and vitamins blasted in the mixture dispersed through its veins, can now be produced by meat producing companies especially sausage makers getting in line to exploit that technology. As a previous German sausage snapper I already no longer buying sausage is like a final death sentence executed. I thought stem cells were used in cancer research but ending up eating it grown on racks and call it meat?

Or read about big worries in a declining beef market Ag-Alert weekly newspaper California Agriculture [January 31, 2007²⁵], as consumer become more educated avoiding beef with red fat no longer tasting beef?

The previously mentioned magazine stated that beef is now cloned to get the perfect steak on the market.²⁶Somebody's Frankenstein hyper taste buds will become the standard in America as everybody can only buy prevailing processed ground-up flavored colored beef usually sold to McDonald's food chain to make you get used to it. In other words, Genes from various animals can now be inserted in cloned cows raised in feedlots to give it a twist of different taste as animals genetically modified in addition are fed bio-chemicals with growth hormones, dangerous compounds you don't want to know about.

Sure enough to read about in Popular Science Magazine that sausage maker put a lot of chemicals in their products, which will last edible 24 years as found out by Garbologist. Some drill wells 20-90 feet deep in landfills and pull up garbage deposited to study and sort out what people bought years ago and examine what did not decompose. That gives information to recycle future products perhaps make plastic computers out of corn-wood fibers. To their amazement found hot dogs lasting up to 24 years in a dump correlated with cat litter trash²⁷. What a nice thought being confronted watching a ballgame in America eating a traditional hot dog to last 24 years and speculate why cancer is on the increase. Why are hot dog treated like embalmed Egyptian mummies prevented to decompose and avoided by maggots or microbes in a

²³ Popular Science, September 2006, Cloned Beef: It's What's For Dinner, by Irina Polejaeva has a secret to the perfect steak, but is America ready for her recipe.

²⁴ Popular Mechanics, March 2007, *The Oik-Less BLT*, by Iran Christ. Who needs animals? It's only a matter of time before factory-grown meat becomes fast-food reality.

²⁵ AgAlert newspaper for California Agriculture January 31, 2007. issn 0161-5408, www.cbf.com.

²⁶ Worry-Free Beef, *Fat Chance Genetic matches guarantee that your steak was cut from a healthy cow*, Popular Science, February 2007, page 49.

²⁷ *The worst job in science*, Garbologist, Popular Science, July 2007, page 64.

dump heaven to last that long. That reminded me of a four-grain bread package forgotten in my refrigerator for 6 months, which is still good to eat and did not see any signs of mildew, fungus or yeast bacteria gone funny. Is it too embalmed with ancient fluid to last to the next war starvation cycle experienced 60 years ago in Germany under Russian communist occupation?

To give you a healthier choice that takes a little work, try buying pure organic, not modified beef and make your own sandwich with a kosher pickle while watching a ballgame. I read on the Internet that somebody is now selling original beef on the Internet in Europe. It makes good business sense and could become very successful in America as I would line up to be the first customer saving money to go to Mexico when the urge becomes strong for a good steak. There is a chance to make a million if you are inclined to be an entrepreneur.

Why is American beef so dangerous to eat can be answered very simple? The beef industry still feeds animal byproducts mixed for cows in feed lots knowing full well that the cow cannot metabolize as a pure vegetarian meat byproducts, which will cause therefore mad cow diseases no longer reported. Now I read in the Science News July 2006 issue that "Mad cow disease²⁸ might linger longer." If a rancher sees a sick cow in his herd of cattle, he no longer tells the authorities and probably just quietly will bury it without telling anybody not to have his total herd confiscated by the government without compensation as seen in Canada and many US feedlots.

The new finding implies that related human illness caused by eating beef from cattle with mad cow disease could lie dormant for many years. Then it is stated further that people eating contaminated beef can cause Creutzfeldt Jakob disease, which kills brain cells and is fatal further down in time. A buried sick cow therefore covered up quietly to avoid confiscation causing profit losses cannot be traced to the source years later.

Think about it when you see red beef fat on your grocery display and wonder of its implication. Why not ask the butcher for white fat meat hopefully not GMO modified beef? Will he get the message when you no longer buy the product? I doubt it as most meat cutters probably never went through high school and requires now a PhD or being born 60 years ago to know the difference.

I feel sorry for Jews being ignorant of kosher beef while eating unclean animals embedded violating YHWH command. Think about it when you see unusual red fat even on lamb and pork on your grocery display the telling evidence of GMO and dangerous cloning practices. Why not ask the butcher for white fat embedded meat hopefully not GMO modified beef still original? Can he find you meat with white fat? Will he even get the message when you no longer buy the product?

Pork

Also noticed that pork fat genes has been displaced with something like red colored looking horse genes to make the bacon look leaner as you can check out your meat counter yourself. Bacon it also more looking like beef jerky now needs to be fried with butter as only a brown

²⁸ Biomedicine-Mad cow disease might linger longer, N.S., *Science News*, July 15, 2006, www.sciencenews.org.

chemical gunk will cook out and must wash the frying pan before I cook the eggs. You need butter to fry your pork sausage as most of the red meat you see through the casing looking like horse or zebra genes not allowed in the United States to be eaten but genetically imbedded is OK according to the FDA, which ruled that the law of labeling does not apply in genetically modified products.

Recent news paper clippings (June 2007) tell of the latest research of 20% human genes in pork and sheep with the goal to have compatible human-pig or sheep organ transfer made possible for humans. What guarantees do we have that the rest of those pork bellies will not end up ground-up as sausage to make some extra profit what the university do not want besides the organ ordered and make me now become a cannibal like being a misled Jew violating their religious belief eating unbeknownst un-kosher polluted meat now a quarter human flesh in hamburgers? Or like (pharmacy?) genetic changed chicken eaten by people ended up being confiscated by the government in a massive search seen on TV. I feel the pain for poor farmers terrible upset in Asia blaming it again on viruses a comatose excuse not raising questions.

Cloning Animals

The danger of cloned animals is now before the court in a lawsuit against the FDA.²⁹ I copied the court order at the end of this report for you to get a taste of what is going on in that area.

I just was highlighting some paragraphs to get the drift of the conflict against a mighty government no longer controlled by "we the people." We are no longer free.

The available science shows that cloning presents serious food safety risks, animal welfare concerns, and unresolved ethical issues that require strict agency oversight. Currently, FDA has no mandatory rules prohibiting the sale of cloned animals or food products from cloned animals.

10 A recent survey conducted by the Pew Initiative on Food and Biotechnology reported that 66 percent of American consumers are uncomfortable with animal cloning and less than a quarter (23 percent) of consumers believe that animal cloning is safe.

13 Announcements, like these, claim the success and benefits of cloning. Yet, there is no method to verify the veracity of these claims because cloning is not regulated by FDA and the scientific data from these experiments are not published or publicly analyzed.

19 Consumers have a right to know if their food is a product of a cloned animal or progeny of an animal clone. FDA has no requirement for providing consumers with this information.

Cloning animals for commercial livestock production will increase animal cruelty because the process inherently involves needless suffering of surrogates and the deformed and sick offspring that often result from cloning.

²⁹ "Dinner for Two: Cloned or Original?" by Paul Elias, Associated Press.

Animal cloning also is antithetical to some peoples' moral and religious beliefs. FDA should institute a mandatory moratorium on food or feed from cloned animals until full analysis of the ethical issues has occurred.

25 The NAS report was released in August 2002. The NAS acknowledged the lack of scientific evidence related to food safety and the paucity of data on the safety of food from cloned animals, stating "[t]here are to date no published comparative analytical data assessing the composition of meat and milk products of somatic cell clones, their offspring, and conventionally bred individuals."

30 Currently, it is largely unknown whether eating cloned animal products is safe because there have been few studies and no long-term evidence demonstrating the safety.

35 Surviving clones often have compromised immune systems and if used in intense animal confinement settings may consistently require the use of antibiotics.

36 This potential for increased use of antibiotics represents yet another food safety issue, which FDA must address in considering whether to approve the employment of this technology. The suffering experienced by surrogate mothers is another concern. Surrogate animals are subjected to repeated surgical operations to implant the cloned embryos and extract the cloned fetuses. Most cloned animals exhibit a condition known as "large-offspring syndrome," which results in overly stressful deliveries for the surrogate mothers.

While the agency fails to regulate cloned animals, research and production of cloned animals continues in a regulatory vacuum, and animal cloners are reportedly considering ignoring FDA's voluntary prohibition and touting the benefits of cloned animals for human consumption. For example, in 2005, the Associated Press reported that the cloning company ViaGen had cloned pigs and beef cattle "ready to efficiently produce juicier steaks and tastier chops."

43 (1) The constituent steps Somatic Cell Nuclear Transfer each meet the FFDCA's definition of a drug. FDA should find that each of the three steps of somatic cell nuclear transfer meets the FFDCA's definition of drug 44. The three component steps of SCNT are:

- i. Enucleation: scientists remove the nucleus (containing the DNA or genetic material) from a cell of an unfertilized egg
- ii. Fusion: using an electrical stimulus, they fuse that enucleated cell with the nucleus obtained from a somatic cell (any cell in the body other than the reproductive cells). The product of this fusion is a **reprogrammed cell**.
- iii. Implantation: the reprogrammed egg cell is implanted into a surrogate mother. The resulting phenotype is allegedly identical to the nucleus donor and cannot be achieved through traditional breeding because SCNT attempts to take genetic material from solely one animal.⁴⁵ **The product of each of these cell manipu-**

lations constitute a drug because each is intended to affect the "function or structure" of an animal. 40 *Id.*

Note : The court ruled in favor of the FDA. Revelation chapter 6 is on their way climaxing on 10. September 2015 guaranteed.

Consumers - Wake Up! Vegetables Poisoned!

The consumer should demand that our own government to do their job to reveal the facts in the interest of the public safety and not ignoring people getting sick just like it happen now to bees and animals dying in the wild and becoming extinct furthermore be alarmed of many organic farmers business failing. The willful suppression of information by the FDA not enforcing Federal labeling laws, are they affright to tell the public by hiding information as the very food producing conglomerates will not tell you about what they now produce? Will they tell you why spinach sold in the food market [December 2006 TV-News coverage] killed so many people and blamed it on E-coli bacteria coming from nearby grazing cows.

But could have been caused by genetic research using those deadly bacteria accidentally left over from the modification process to get larger spinach plants now contaminating other fruit or vegetable as well, or dangerous pharmacy drugs imbedded by pollen from a neighboring field? In the later case these pharmacies drug laden vegetable should never to be eaten by people for obvious reason any medical doctor would be appalled. Is that perhaps why Mexican farmers I saw on TV tending the many fields in California next to the contaminated spinach field showed now being on a TV special program to cover-up a crime to be dressed with protective head gear, gloves, special shoes and was amazed to see fancy toilet facilities with special soaps and disposable in every field to make you think that all Mexican laborer are save working among genetic modified vegetables? Is growing simple salad now so dangerous to grow to be germfree protected in a bunny dress? Why was the spinach field ploughed under so quickly and replaced with cover crops seen on TV, destroying the evidence before the camera crew and government agency had a chance to check it out?

Are farm workers exposed to E-coli bacteria working in vegetable fields without a breathing mask and not being informed of the danger being surrounded in the workplace violating OSHA laws? How many farm workers died and became permanent sick needing organ transplant working unprotected in vegetable fields not recorded by the health department because they are not legal workers living and working in America?

Why does the FDA not enforce the existing Federal labeling laws on the books, which require every substance imbedded in the product must be labeled and tell the farmer and the employees not educated in GMO danger of the risk when growing such vegetables. Check out your grocery store like a cookie label and notice about 30 chemicals ingredients I have no idea why they are in a cookie. So what is the difference if 95% unlabeled fruits and vegetable including meat products now sold in the US with other ingredients embedded is not treaded the same way? Would the consumer buy the product if they find out that leftover viruses and E-coli bacteria could have survived during a gene process

imbedded in vegetable or fruit? It is easier to play Russian Roulette than trust an evolution fairy tale believing genetic scientist who believes a frog can turn into monkeys (prince) ignoring what was original created by a creator for our benefit. Only an uninformed consumer can be told lies without consequence.

I avoid vegetables, which have a little sticker with a number, which has become impossible to find an alternative, which was only meant for lawyers or maybe the health department to identify when massive sickness or death should occur like the spinach event aired on TV to withdraw it from the shelves. Will they tell you that it may contain a higher concentration permitted of systemic chemicals imbedded like pesticide, herbicide, growth hormones, antibodies and so many more like pharmacy genes we do not want to know anything about?

E-coli Bacteria Criminally, Purposely Transferred into Vegetables?

Please read a short E-mail NEWS coverage to tell you where GMO is heading to replace God to create life. I mentioned that **E-coli bacteria** were used in genetic modification, which resulted in death eating spinach. The industry paid for a TV program to cover up their crime to blame it on cows in the hill not connected with the contaminated spinach field. Searching to understand gene technology and reading magazines article collected for my GMO Babushka book to inform the public I came across with this information, which will prove my theory as a neophyte in GMO to be correct. Now I discovered what I all along suspected but now revealed in this news report I copied. You be the judge, and hopefully now educated a little more how GMO works.

Church points to the most popular synthetic biology method under study, genetically modifying existing organisms, such as E. coli bacteria, to make them do such things as churn out medications"....My ending to clarify the sentence.... pharmacy genes now imbedded in eggs and vegetables we eat and sold in the market made only possible with E-coli bacteria as some survived the process and killed people embedded in spinach or eating modified drugged eggs?³⁰

Also, notice the analogy used as a PC and reprogramming it into a Mackintosh computer code cell system. Seeing GMO from a dual rail perspective gives us a much better understanding what Frankenstein black magic do behind our back. The **E-coli death** caused in the Spinach fiasco should be prosecuted and charge the scientist with criminal homicide as they caused 28 deaths eating spinach vegetable contaminated with E-coli they introduced in the vegetable knowing full well that E-coli bacteria not always is eliminated by the cell intelligence immune system and can break out again in some plants among ten thousand in one acre modified spinach grown obviously not mentioned on the special TV program to keep the public ignorant and comatose. When we buy genetic modified fruit nobody cares and wonders why are fruit labeled with a sticker but blame yourself. I have been told to have a

³⁰ Dr. George Church, a genetics professor at Harvard Medical School.

constitution "we the People..." but why reelect your senators and congressmen not controlling the Special Interests, is it because of their big donations to get re-elected? Why not make the difference and save this world for your children by voting them out -all of them, period. Its too late already as genetic modification once in the environment will take hundred of years to die out like it takes thousand of years to baby watch a nuclear waste produced in this generation more trouble for the next.

You should really become acquainted with a deadly E. coli Bacterium. It is a favorite toy for scientist playing around like a bull in the China shop. Read the article "Microcosm: E.coli and a New Science of life," by Carl Zimmer in **Science News Magazine**, May 24, 2008.

Notice how the angel of death in diseases, now genetically mixed up with natural lively organisms, always fascinates the scientist experimenting with it. The deadly E. coli bacterium demonstrates vigorous life in the Petri dish. You can read how Mr. Zimmer compared E. coli at work in his Petri dish to familiar aspects of "humanity and all life."

How perverse! No wonder E. coli was the species atheistic scientists first used to decipher the genetic code and to learn how genes switch on and off. It has also been a model for studying how creatures sense and swim, cooperate, wage war and allocate resources. Experiments with E. coli ushered in modern advances in molecular biology and then synthetic biology. "If scientists can genetically engineer E. coli, why not any animal?" Zimmer³¹ asked. "There is no essence that defines a species."

A bull charging through a China shop does not reason and consider how or why the owner laid out his shop and stocked it with the valuable selection he hopes to sell. Neither do most modern genetic technicians stop to think about why God created a complex biological web of life with embedded intelligence in every cell structure. Divine intelligence must be revealed. Humans must be humble enough to ask for it.

The mass genetic modification of biological organisms driven by multinational greed is messing up our environmental China shop worse than a bull does. The world we live in is full of precious biological life forms, each embedded with a mystery, as every medical doctor worth his salt would tell an atheistic scientist. They are looking in the wrong places to solve food production problems.

Smashing atoms with 100 billion dollar cyclotrons as big around as a city will never decipher the secrets of nature. It is dangerously stupid to use E.-coli bacteria to manufacture synthetic life: whatever progress made will be harmful or unsustainable at best. Long-lasting good will never come from it. It is like smashing atoms to smithereens and then scraping the fractured pieces off the cloud chamber walls to figure out the original pizza pie recipe. Deadly bacteria will not produce life but death. Just watch the news on TV with an open mind.

We must stop GMO scientists hiding in universities and corporations who are engaged in an uncontrolled race toward getting another gene patented to legally charge a fee if someone would have fruit or vegetables grown on his garden plot if you sold some fruit to the neighbors even if accidental gene was embedded by wind or weather. The indus-

³¹ Elizabeth Quill, Pantheon Books, 2008, \$25.95.

try is no longer interested in basic research as their behavior crossed the criminal line with a lot of dead people laying in their path with thousands waiting for an organ transplant destroyed eating vegetables. I witness programs on TV with an uncontrolled frenzy to assault nature. Check it out what their aim is; quote: “its part of a broader field called “synthetic biology” or “synthetic genomics” that aims to build new organisms that work in ways totally different then nature intended.”³²

Modern GMO scientists to not believe in two entropy laws of physics and want to supplement it with another one replacing it with GMO technology **“a first step toward making synthetic life” circumventing basic physical entropy laws.** Their aim is nothing more in creating plastic artificial food with modified taste receptacles to prove that the religious idea “God” is obsolete as man will therefore become God. Read Revelation chapter 6 how God responds to this challenge from another rail perspective as humanity must suffer, which tolerates crimes perpetrated against humanity and nature according to God’s laws “cause-effect” indisputable existing since creation.

Talk about identity theft: Scientists changed one species of bacteria into another by performing a complete gene swap. By Lauran Neergaard, AP Medical Writer WASHINGTON:

It’s a step in the quest to one day **create artificial organisms**, part of a bigger project to custom-design microbes that could produce cleaner fuels. But the way it was performed, dubbed a “genome transplant,” has genetics specialists buzzing.

“This is equivalent to changing a Macintosh computer to a PC by inserting a new piece of software,” declared genome-mapping pioneer J. Craig Venter, senior author of the new research published Thursday by the journal Science.

For years, scientists have moved single genes and even large chunks of DNA from one species to another. But Venter’s team transplanted an entire genome, all of an organism’s genes, from one bacterium into another in one fell swoop.

These weren’t complex **bacteria**³³, but cousins from a family of small, simple microbes known as Mycoplasma. Nor do the researchers know exactly how the transplant took hold. But somehow the new genes cleanly replaced the old and started working correctly — not very often, but in just enough cells to prove the concept.

The experiment “is a landmark in biological engineering,” said Dr. Barbara Jasny, a deputy editor of Science. Beyond pushing scientific boundaries, why would switching a **goat germ into a cattle germ be useful?**³⁴

That’s not the real aim. It’s part of a broader field called “synthetic biology” or “synthetic genomics” that aims to build new organisms that work in ways totally different **then nature intended** — and scientists are divided

³² By Lauran Neergaard, AP Medical Writer

³³ Deadly bacteria?

³⁴ Using deadly bacteria?

about whether the Venter approach will really play a big role.

“There are people doing some important synthetic engineering efforts with other approaches,” cautioned Dr. David Relman, a microbiologist and infectious disease specialist at Stanford University. “This is a different one that is a little more daring, and perhaps dramatic.”

“One could wonder whether this method will be used for more than a tiny research community,” added Dr. George Church, a genetics professor at Harvard Medical School. “Most people find it easier to work with pieces” of DNA.

Church points to the most popular synthetic biology method under study, genetically modifying existing organisms, such as E. coli bacteria, to make them do such things as churn out medications.

In contrast, Venter’s self-named institute in Rockville, Md., is trying to create an artificial chromosome — the structure that carries DNA — that contains industrially useful genes such as ones that could help produce alternative fuels.

That work is far from complete, but to make it work, they’d have to put the artificial chromosome into a living cell and it would have to jump-start that host. Thursday’s experiment was designed just to prove an entire-genome switch is possible, with regular bacteria DNA.

The Venter team picked two Mycoplasma species, simple germs that contain a single chromosome and **lack the cell walls that form barriers in other bacteria.**³⁵ First, they added genes to turn the donor bacteria an easy-to-spot bright blue, and to make it resist an antibiotic used to kill off any host germ that retained its own genes.

Then they stripped off the donor chromosome’s proteins, to see if naked DNA alone could “reboot” a foreign cell. Blue germs appeared within days of dropping the genome into lab dishes containing the second bacteria. Not many — only about one in every 150,000 cells took up the donor genome and grew, but they bore no evidence of the original DNA.

“That’s extremely inefficient,” acknowledged lead scientist John Glass, a Venter Institute microbiologist. “We think we can steadily improve this.”

“Synthetic genomics still remains to be proven, but now we are much closer³⁶ to knowing it’s actually theoretically possible,” added Venter.

It’s not clear that the method would work on larger, more complicated bacteria, other specialists cautioned. Nor does the work automatically mean an artificial chromosome alone could activate a living cell.

³⁵ The front door policeman is missing recognizing deadly germs and other bacteria?

³⁶ Watch God’s finger in the sky. Keep reading.

"It's going to be much more complicated to do with synthetic organisms," said Dr. Jonathen Eisen, an evolutionary biologist³⁷ at the University of California, Davis. Still, "it's a great first step" (My ending ... for God's wrath.)

http://news.yahoo.com/s/nm/20070628/sc_nm/genes_synthetic_dc_ylt=ArISgPAMNu_nkeJkdzBtxIobr7sF

Terminator Genes - Satan's Ultimate Insult to God

The gene technology corporations will not tell you about terminator genes³⁸ imbedded in seeds to make the next generation planting cycle extinct when you buy the seeds. That spells out big profit for the corporation as you have to buy again for the next year season seeds for your garden since the previous years seed saved will not germinate. Or is it damage control of a pharmacy gene process running amuck?

When scientists wanted to curtail potential death unavoidable at this time working with E-coli bacteria used as a tool in modification process, which makes transferring DNA possible, they imbedded terminator genes in seeds to limit the exposure maybe for health problems. However, that process would also prevent that seed from growing into another plant? Logically therefore seeds with modified sex reproduction spliced out will then become extinct in the next generation as the farmer is forced to buy it through the same corporation as his seed usually saved for the previous crop will not germinate. The seed company now becomes very wealthy who controls the world seed bank as the farmer is forced to buy seed again for the next season. That scenario is a dangerous situation provided they do not become bankrupted like Enron Corporation.

But if the farmer is too poor to buy seeds for the next year and never did before like thousands in the third World, what option is left for them? India last year had a huge failure in rice and therefore starvation for many families. Our American seed corporation does not care as they are caught on one side to curtail death caused by E-coli bacterium modification or death by starvation. Money won out but political in the world America will be hated more, which one day will erupt on our soil.

To insert terminator genes into seeds is the highest evil ever perpetrated in history and a crime against humanity as it affects everybody around the globe.

Denying the cause and effect laws or the laws of entropy is working against the scientist. They believe that they are exempt from moral laws imbedded in the human race and physics when dabbling in genetics and tell you, "do not worry to eat the bigger fruit as it is good for the special interest economy with gigantic factories corporation making more money. Forget about old-fashioned organic farmers disappearing, which are only a fly in the soup and should be eliminated as troublemakers. We can already see globally the effects in the third world as local rice production was reduced in India, but they could not understand its reason not being educated that rice seeds next time

³⁷ Does Dr. Jonathen Eisen, an evolutionary biologist believe in fairytales that a frog kissed becomes a prince against entropy laws?

³⁸ "Terminator Genes: Here's Another Fine Mess Biotechnology Has Gotten Us Into," Karen Wright, *Discover Magazine*, August 2003.

around will not grow again with terminator genes imbedded coming from America. Now farmers learned the hard way what American corporation did and will plead in the future with terrorist to help them to destroy America so we can live another season. Keep an eye on New York nuclear destruction coming soon and connect it with what you read here being educated hopefully learning about GMO. When I see on TV New York going up in a mushroom cloud then I know why such hatred from other nations was expressed against America destroying globally their food forever.

What is outright criminal to perpetrate a lie and sell fruit and vegetable not labeled according to federal laws and without testing it on laboratory rats first and then to say that it is safe for human consumption and in addition teach stupid evolution fairy tales as science in our schools to make the future generation of kids compliable never to question what the FDA, politician and deranged scientist dish up, will become the crime of the century destroying our civilization.

Genetic Flashback to Ancient Times

To expand our horizon in GMO technology from a dual rail perspective let me divert a little back in humanity's history, which always was a mystery for me to see if we can learn something from the past not allowed to teach in our schools for obvious reasons. The unanswered question seeing evidence of genetic modification in ancient records fascinated many without much success as our modern education establishment is brainwashed in the wrong direction believing in fairy tales and theories of million years of evolution and can therefore not recognize what is buried in ancient scrolls or seen on stonewalls. Genetic research is so strange for many but can plainly be seen recorded in the Bible—Genesis report or in most ancient books mentioned written by Jashar or Enoch and would just thoroughly investigate it and study stonewalls or Egyptian tombs embossed from ancient times alongside with the tools available in science.

Let's examine, what humanity was doing playing God before the Atlantis civilization vanished as mans nature has not changed comparing our gene technology in magazine articles with pictures of ancient craft of a civilization before the Flood time. Information embedded in stones as a medium like an Aztec calendar clock³⁹ is more durable over thousand of years to convey ideas and should not think of them as primitive like our modern scientist believing in evolution myth but take it serious what they communicate and find the reason of why would they too be so fascinated in changing nature. Even when we examining art objects from ancient time in museums or found in antique stores, we should judge them with the possibility seeing them with the eyes of GMO, which could have been practiced in ancient times.

As a previous inventor of high tech instruments like your computer disk drive still useful in your laptop computer came about as from previous inventions with concepts laid out by others then developed further reflect a higher level to be useful. The first disc drive I was working on in the 1960s was bigger then a wash-machine and needed a forklift to move it. Now it weight less then a pound and getting smaller with a

³⁹ Third Babushka book, *Asteroid Answer to Ancient Calendar Mysteries*.

thousand times more capacity but still in principal the same only more efficient. So strange ideas do not exist in a vacuum as they may tell of realities we are only ignorant about.

For an example, I bought a wooden figure in an obscure antique country store and made a photograph, which I copied for my front page Babushka GMO book to show that we are not alone of thinking along a genetically altering path indicating what may have been fashionable in ancient times alive seeing only extinction on this earth as reference. Notice that ancient wooden Aztec figure looks like a Mermaid with fish tail. It has short wings not for flying but indicating that it comes from Nephilim genes with half human-half fish and is female with protruding breasts and across her sex organs, there is a male buck with horns indicating fertility. I believe this art object is 300 years old seeing woodworm holes and judging by the paint, it may be much older. Why do I find ancient art object everywhere around the world in different cultures all sharing GMO ideas, which must have embedded previous reality like my old disk drive invented first by others.

Following the trail of recessive genes and finding it at our doorstep looking at our four different ethnic races in humanity later appearing after Noah's time with white-black-red and yellow skin color pointing out GMO laws embedded and practiced in ancient times. We have learned that recessive genes will emerge in later generation's, which was faithful recorded by ancient Hebrews history books among other cultures well documented mentioning giants appearing again like Goliath and his brothers Gath two times bigger if you heard about David slingshot story. Even earlier in time 500 years before, Israel in Moses time (1400 BC) sent 12 spies reporting what they saw in the land of Canaan, seeing giants two times bigger scaring everybody except two spies Caleb and Joshua and brought along huge recessive gene modified fruits and grapes so big and needed two persons to carry.

Joshua, 40 years later, reflects on his experience in the book of Jasher (Joshua 10:13, 2.Samuel 1:18) on meeting giants of the Anakim tribe and must have researched the ancient records of the descendants of Ham telling of Nephilim people via Noah-Ham-which is Noah's grand son Canaan, which was cursed why? Was it found out to have recessive genes in his lineage of preFlood giants or people emerging with different skin color as the Hebrew mentioned a word connected with Canaan "uncovered" and to Noah's greatest shock and surprise to find out that his family was not 100% genetic pure from Adam. Being stunned to notice that one wife of his son still had embedded recessive genes aberration from the Nephilim-extraterrestrial tribe genetic mix-up time causing the flood instigated by God. We see in history later a super tribe emerging and becoming the Rephaites and Anakites, the descendants of Ham the son of Noah known as giants ending in Sodom Gomorrah Abrahams time frame?

It could have been the reason for destruction of that society developing into another genetic aberration developing for humanity not allowed by God to exist, which is reflected in Gomorrah's behavior who wanted to have sex with visiting angels to procreate a master race forbidden that even two daughters offered by Lot for sex were refused? I learned that modified recessive genes from previous gene manipulations will

break forth hundred years later with accompanying different behavior abilities connecting with the early rootstock, which is proof of previous GMO human-animal experimentation from before Noah's days. That points out even Noah's descendants becoming the second civilization no longer was genetic pure from Adam seeing defective recessive genes later in his great grandchildren and now seeing different race of humanity emerging with evolving in four distinct skin-color thousand years later according to the Second law of Thermodynamic. It was high time in 2288 BC from my perspective for God to save his creation delayed by his great mercy stretched to the very last minute to make a genetic extinction path of gene modification gone out of control to end.

So Genesis eyewitness and other ancient cultures tell us of gene technology story of an ark-submarine boat as means of saving original genetically pure animals including Noah's family with lots of clean genetic seeds stored as a gift for future people being born on the other side of that apocalypse. Before 2288 BC, it was big business changing genetic manipulation even changing humans into genetic aberrations like mermaid half fish, half lion, half horse half bird exploitation seen on ancient stonewalls and statuettes we wonder about and think of it as religious mysteries interpreted by mono rail specialist biased in an evolution religion.

At the end of this GMO report you can read another story from another author highlighting the other rail of my dual railroad perspective with more information on this subject. If God had not sent the flood it would have destroyed all of God's original creation and you and I would not be on this planet to tell you about as we all would have turned perhaps into monkeys as modern scientists only paint it on museum walls lacking fossilized bone examples. Finding questionable fossils of half monkey half man like "Lucy" could rather point to the same gene experiments as embossed in Egyptian and Babylon graves if you just ignore million age theories which comes with their package. The Lucy fossilized remains were discovered in 1974 in the remote, desert-like Afar region in northeastern Ethiopia. Lucy is classified as an *Australopithecus afarensis*, which lived alleged in Africa between about 4 million and 3 million years ago, and is the earliest known hominid. Most scientists believe afarensis stood upright and walked on two feet, but they argue about whether it had ape-like agility in trees. The loss of that ability would suggest crossing a threshold toward a more human existence.

Discovered Human Giant Bones

The Bible recorded that giants existed, descendants of the Anak or from Cain's son, Enoch, who lived before the Flood. Genesis 14:5 references families of giants in Abraham's day: Rephaim, Emim and Zuzim. When Moses lived, the Israelites defeated Og, King of Bashan. We read this interesting fact:

For only Og king of Bashan was left of the remnant of the Rephaim Behold, his bedstead was an iron bedstead; it is in Rabbah of the sons of Ammon. Its length was nine cubits and its width four cubits by ordinary cubit. (Deuteronomy 3:11)

47 inch Human Femur

In the late 1950s, during road construction in south-east Turkey in the Euphrates Valley, many tombs containing the remains of Giants were uncovered. At two sites the leg bones were measured to be about 120 cms "47.24 inches".

Joe Taylor, Director of the Mt. BLANCO FOSSIL MUSEUM in Crosbyton, Texas, was commissioned to sculpt this anatomically correct, and to scale, human femur.

This "Giant" stood some 14-16 feet tall, and had 20-22 inch long feet. His or Her finger tips, with arms to their sides, would be about 6 feet above the ground. The Biblical record, in Deuteronomy 3:11 states that the Iron Bed of Og, King of Bashan was 9 cubits by 4 cubits or approximately 14 feet long by 6 feet wide!

GENESIS 6:4

There were Nephilim (Giants) in the earth in those days; and also after that when the sons of God (Angels?) came in unto the daughters of men, and they bare children to them, the same became mighty men which were of old, men of renown.

More Info & Replicas available at mtblanco1@aol.com or www.mtblanco.com
Mt. Blanco Fossil Museum • P.O. Box 559, Crosbyton, TX 79322 • 1-800-367-7454

A cubit is about 18 inches, so that was a pretty big bed! Another outbreak of recessive giant genes occurred in David's time, which made him famous by killing Goliath. Goliath also had brothers recorded to be over 9 feet tall.

Fossil bones were found in different locations that witness to the existence of very large human beings. You will not learn about these people from the corrupt education priesthood.

Instead, they teach about "Lucie," which is an artificial assemblage of small bone pieces gathered from distant locations and put together for a posed publicity picture. It does not bother their consciences to promote 3 foot tall animal bones as a human ancestor. The ignorant public is willingly deceived by the manipulated "evidence" for an atheistic evolution religion that denies science shamelessly.

The picture below shows a model of fossilized bones collected from a different location. You should check it out and decide for yourself if they are authentic.⁴⁰ This museum is open to the public. You could write your own Babushka book! Also, check out the sandstone muck human footprints imprinted in a dinosaur track exhibit also in Texas.

A big fruit mystery arose when I read in Numbers 13:23 that the 12 spies with Joshua and Caleb as their leaders came back from checking out the Canaanite giants carrying huge single cluster of grapes from the valley of Eshcol carried by two people. They called the inhabitants the descendants of Anak and referred to themselves like grasshoppers in comparison. As proof, they brought these unnaturally large grapes.

cestors wherever they settled.

Noah must have saved some rootstock from before the Flood, which he planted soon after leaving the ark. That rootstock was from prehistoric grapes much bigger in size due to the higher oxygen levels that existed before the Flood as proved from ancient amber samples. I wish I had some of those cuttings for my vineyard in California. I might make some money for a change! With a truck transporting super grapes would be no problem.

Not understanding nature from ancient times linked with the parabolic time dimension makes investigation of old fossil cells a mystery. Why are they bigger than anything we can find today?

Many imagine that the universe must be billions of NASA years old. They measure data from our present time but do not consider if the speed of light is not constant, which would make our time dimension getting shorter as clearly stated in the Bible and proven by ancient gold-bronze clocks exhibited in museums.

The Biblical creation model makes much better sense when you have objective facts. The Bible tells us about ancient genetic technology in Genesis and other ancient books you can read. These stories are verified with a new discovery deciphering ancient mystery clocks like a Chinese bronze clock and others, the most famous being the Antikythera bronze clock⁴¹ now deciphered.

Check out the clock Babushka book, **Asteroid Answers to Ancient Calendar Mysteries**. Do not just put away this unheard story from your mind simply because it does not match the fairytales taught in schools. Test it out with true science for yourself!

⁴⁰ <http://bibleprobe.com/nephilim.htm>

⁴¹ www.antikythera-mechanism.gr

Chinese Bronze Clock⁴²

Notice in the picture below that the center is embedded with a modern computer 8-bit binary code of dashes and dots, which are like “zeros” and “ones” in this Bronze Age, 4,000-year old clock. How did the ancient know about our computer language?

Now coming to our time after thousand years previously enjoying original uncontaminated and unscrewed genetic vegetables or animals' food saved from Noah's time not modified by the Nephelim Atlantis civilization humanity again is confronted with Satan's genetic modification trick to destroy again what God created you can also read about in the third Babushka Calendar book. That first genetic mix-up crime resulting and ended up in extreme violence causing God to respond with his wrath and send an asteroid 5 February 2287 to destroy genetic aberrations on the earth, which would thereafter wobble like pendulum screwing up ancient calendars you can checkout in museums bronze-gold clocks now deciphered. Here is just another proof why there was a major flood catastrophe destruction and learn about from another ancient witness measuring time not they way we do today but invented mechanical devises measuring a wobble of our earth caused by an asteroid matching the Noah's Flood period, which can therefore be dated applying our Gregorian calendar converted.

Today our technology is getting close what was then done before, as a few years ago I remember before congress the questions where asked if modification of a human fetus would be allowed where gene technology could progress to a point violating existing abortion laws to integrate with genetic research. It was suggested before senators to harvest human transplant organs from fetuses harvested genetically modified to have something like a baby without arms and legs in a special cubical developed, which would be killed when the organ was needed. Would they consider it human under the existing abortion laws?

We have forgotten that was the time of drug induced birth defect experiments gone the wrong way seeing babies born without arms and some without legs on TV. If the senators would have said it is OK then we would be at the doorstep of what was done in Noah's time. Pres-

⁴² www.Jalanmiami.com ; Jalandjian NE Second Ave 33137 Miami FL 33921 (305-572-9998)

ently to circumvent abortion laws we use fetus stem cells imbedded now in pigs with ever increasing percentage now 20% human genes and doing it through the familiar backdoor method. It is just a slice of salami at a time to have it all. I hope the human pork belly will not be ground-up in sausage, which would make me a half a cannibal another gene aberration without knowing it. Check out your recent magazine articles referenced later. Although scientists have learned a great deal about the human genome, the overwhelming majority of DNA remains a complete mystery. For all the new advances made in genetics, we are constantly discovering how complex the DNA really is and how much more we have to learn⁴³.

Conclusion

My six Babushka books are unusual. They view the universe from a dual rail perspective to educate what is far out presented and will not find it discussed in church or any university. They resemble a puzzle, which will take some time to put together. But when you see on TV a nuclear explosion in America then take the time and look for them if you can still get your hands on some babushka eggs books now free on the Internet if the government still allows a free Internet exchange. So buy now or download and print them. It may be your last chance to gain advice on how to survive with a roadmap that explains what will happen in the future.

To conclude what has been said that after thousands years of human history humanity again has reached the technical ability to change God's original design, mixing indiscriminately vegetable-animals genes, which will permanently change the original gene structure around the globe until all original seeds become extinct forever in this generation. This is in cross violation of the original oracles or contract made by God with Adam and was ratified with Noah. The earth belongs to God and we are only a temporal tenant and again must send another asteroid as prophesied to curtail mans Frankenstein destructive madness like in Noah's time. It will end humanity's destructive behavior inventing nuclear and genetic virus-bacteria deadly poison bombs unleashed on humanity ending in Armageddon and caused food to become extinct in a gene mixing insanity. It will end another evil generation lived on this earth with the same method history recorded and stops humanity destructive path with another event, which the Bible calls the Apocalypse. I stumbled on a date 2008-2015 writing two Babushka books to explain it what is happening around us and not because I am a prophet. It is for you to check it out.

Looking from the scientific aspect you will find that humanity is not far behind and reaching the point of permanently damaging God's creation by genetic manipulation just like they did before the flood of Noah's days. Believe it or not, most vegetables have already been 95% genetically altered for the worse as original seeds become now extinct within the next 10 years. God will not idly look on while his creation is destroyed by puny man and Satan gloating as he has send another Jonah in the town New York to announce its destruction **9 February 2009** or repent. Seeing now a date on the horizon we should get informed about Hebrew clock cycles, which will foretell events shortly

⁴³ Finding Treasure in Trash, by Koinonia House, 12-13-2005.

to come. Learning about clock dates and Hebrew numbers⁴⁴ and applying them to present times like 9-11 is only a precursor for events to come. I would pay attention to Hebrew prophecy codes matching clock gears and would not stay in New York when that time comes around, like being warned before 9/11 working in the building, which disappeared from downtown area.

So heed this warning as you may not be around in New York after 2009 if you live there. The Ancient Hebrew Alphabet exposed a system like clock cycles, which

mesh and can therefore be accepted as true because they are imbedded in the Torah being a Gentile I discovered and revealed by God, which I know personally through my spirit, like prophets did in ancient times. Presently some red heifers are being raised on special farms to be ready when the Temple in Jerusalem 2009 is erected in Israel. Will these animals be kosher or have unclean animal genes imbedded to pollute the new Temple and incur God's wrath? I am sure that they will not be bought from America as other countries still restrict import of beef grown in America.

Asteroid Coming our Way!

10 September 2015

When we see God's finger in the sky^{45,46} then remember what I told you in this booklet. God is angered with humanity screwing up his creation diabolically poisoning the environment and destroying most original seeds with terminator genes while all along denying that God exists against the background of scientific proof. It is willful rebellion against the creator and will make an end to man's destructive behavior just like he judged the Nephalim-Atlantis First Civilization in Noah's days, which perished on 5 February 2287 BC⁴⁷; ex-

cept this time around He will save more of humanity for a better future as He announced that the Kingdom of God on earth is ready to come and rule the world with an iron fist. God no longer will be invisible but becomes visible in the person of Jesus Christ every body around the globe has heard His name not to get confused with other cult religions, you can read about it on the Internet.

My last question I like to ask coming from a Christian reading science magazine from a dual rail perspective and familiar with the Bible would you listen to another Jonah if he came to town announcing God's judgment with a date of the Apocalypse. Would you be interested to read how to survive and be safe in God's hand like within an ark in Noah's

⁴⁴ Check out the meaning of numbers in the Hebrew Alphabet Number system on the internet, a newly discovered code. www.apocalypse2008-2015.com.

⁴⁵ Killer Asteroid coming our way, **Popular Mechanics**, December 2006.

⁴⁶ Incoming, (an asteroid prediction) by Gregory Mone, **Popular Science**, September 2003.

⁴⁷ A new Babushka book: **Asteroid Answers to Ancient Calendar Mysteries**. Seven mystery gold and bronze clocks deciphered to show our present age will end in 2012.

time, when hell is around you? Relating these mysteries unknown to science I conclude that the Apocalypse projection clock cycles 2008-2015 date is now witnessed from science embedded in ancient mystery bronze and gold clocks exhibited in museums, which can be cross-referenced in history and checked out with added information supplied by archeology-geology will therefore establishes truth as a second witness. What you do with that controversial information is your problem as I hope they will not kill the second Jonah messenger sent. If you live in New York, I would watch therefore that specific date discovered: New York - 9 February 2009? And tell your relatives or friends if they live there. I hope that the secular controlling inquisition priesthood similar to what Galileo experienced will not hate the messengers of bad news.

Noah's Ark Found in Norway?

My GMO report is viewed from a scientific aspect how humanity destroys and makes now extinct most seeds. God previously preserved for us original seeds and animals stored on a boat 2288 BC to survive an asteroid impact. That story is true if you have the time assembling a good puzzle picture by following the pattern, learned to be patient and skill to assemble the pieces together from geology, ancient history and the Bible recorded. By using all the records to humanity available should give us a well rounded perspective of our world rather be political correct riding on a narrow minded mono rail system unbalanced educated and biased to believe in an evolution religion.

God's finger preparing for the coming asteroid 2015 is already waiting in an 820-day orbit around the sun as reported in magazine you can read too. Incredible to me to discover that God will not let his creation to chance of extinction and provided again another boat to protect future seeds not having been destroyed by Satan's friends. He uses the same method again recorded in Aztec and Genesis history reported but this time not uses water but a firestorm to completely burn off GMO perverted seeds from the earth including guaranteed will destroy permanently American corporations and its atheistic evil scientist followers from this globe.

Like ancient humanity in Noah's days manipulated and produced GMO aberrations deteriorated into an atheistic society too, denying God the creator who blesses us with the gift of abundant variety foods with regular season guaranteed unchanged for thousand of years - will not idly watch on the sideline to have his creation destroyed by mortals. Especially this time again when atheistic humanity allowed and sanctioned the crime of genetic destruction in terrible conflict with God big time. God will restore original seed again for the next generation benefit by using the same method he used before and now has warned people in prophecy of another 52 km asteroid already in orbit even the Aztec-Toltec-Mayan religion matches the Bible Daniel-Revelation we should not ignore but check it out.

Enough information is stated in these four Babushka books. Here you can read another magazine article how God is preparing and saving his creation from the perils of the coming Apocalypse 2008-2015. Therefore, when we read about another Ark of Noah in our time frame, which will too preserve seeds for the next generation, we should take notice of God's intention. **That is another sign of many that God has determined for the apocalypse to arrive.** Even comparing the size of the ancient Ark divided by crossover ribs into cavern is now replicated in cement in Norway Ark building what a coincidence?

Notice when Noah went into the ark, God closed the door from the outside after Methuselah's death 21 December 2288 BC. Then there was silence nothing happened for 46 days, which gave Noah's workers time to get organized. But on the second month the 17th day the deluge started with horrible noise of Hydrogen and Oxygen colliding producing water with an earth rendered by an asteroid causing the original spin axis to change on the 5 February 2287 playing back the planetarium sky. Ancient clocks track the earth wobble as modern scientist could not decipher why someone would build clocks made from pure gold and bronze weighing more one man could carry as many found in museums around the world not deciphered. The Apocalypse was dated to be 21 December 2008 according to 66 mathematical proofs from the Hebrew alphabet code. In addition it is witnessed from science the other rail as now we have ancient calendar clocks deciphered, verified by ancient clocks like the Aztec and Antikythera, a 32 gear bronze clock calculators measuring a time converted to Gregorian calendar to be in co-aligning with Biblical prophecy to take away the excuse "nobody knows the time."

So God has finalized an accurate calendar for humanity and forewarned us to take heed decided to burn again genetic modification with fire. He will preserve healthy seeds stored again safely in an ark away from the destruction of an asteroid already in orbit. In this report from science, you will hear about the reason for that project, which amazed me greatly. How many witnesses must God send to convince us what is presented in four babushka eggs as I am not skilled to write as a foreigner? It seems that I had to endure not having peace unless I had followed God's urging to write it down. Jonah unwilling at first too finally has come to town with a warning and what you do with that information is your business as I do not benefit financial rather lost a lot of my retirement as Jonah did not get paid either.

The World's Agricultural Legacy Gets A Safe Home⁴⁸ Vault on Arctic Isle Would Protect Seeds

By Rick Weiss

Washington Post Staff Writer
Monday, June 19, 2006; Page A01

The high-security vault, almost half the length of a football field, will be carved into a mountain on a remote island above the Arctic Circle. If the looming fences, motion detectors and steel airlock doors are not disincentive enough for anyone hoping to breach the facility's concrete interior, the polar bears roaming outside should help.

The more than 100 nations that have collectively endorsed the vault's construction say it will be the most secure facility of its kind in the world. Given the stakes, they

MAP: Laris Karkilis, The Washington Post

agree, nothing less would do.

Its precious contents? Seeds -- millions and millions of them -- from virtually every variety of food on the planet.

Crop seeds are the source of human sustenance, the product of 10,000 years of selective breeding dating to the dawn of agriculture. The "doomsday vault," as some have come to call it, is to be the ultimate backup in the event of a global catastrophe -- the go-to place after an **asteroid hit** or nuclear or **biowarfare holocaust** so that, difficult as those times would be, humanity would not have to start again from scratch.

Once just a dream -- albeit a dark one, attractive only in comparison to the nightmare that would precede its use -- this planetary larder is about to become a reality. Today, on the barren Norwegian outpost of Svalbard, the prime ministers of five nations and a small throng of other officials will lay the cornerstone for what will be, in effect, the Fort Knox of seeds.

"We will have the biological foundation for all of agriculture, which is really saying something," said Cary Fowler, executive secretary of the Global Crop Diversity Trust, the international organization coordinating the vault's creation with the Norwegian government. "It is a stunning achievement, if you think about it, and it would be about as safe as human beings can make it."

If progress continues during the short building season this summer and next, the high-tech cavern will start accepting deposits from smaller seed banks and agricultural and scientific organizations by fall 2007 under the terms of an international treaty that took effect two years ago.

Then, with a loud clank and the sound of sucking air, the door will close. And the Svalbard International Seed Vault will slip into a sub-zero slumber -- an insurance policy for human civilization.

Scientists estimate there are 2 million varieties of plants used for food and forage today. That includes an astonishing 100,000 varieties of rice, the major staple of the human diet, and more than 1,000 varieties of banana, a nutritious fruit of global importance.

Seeds from these crops, which can be smaller than poppy seeds and as large as coconuts, are invaluable repositories of plant DNA. They are the raw material that farmers and researchers rely on to develop more productive and nutritious plants that can cope with climate change, new diseases or pests.

About 1,400 seed banks already exist, including large national collections in the United States and China; international ones maintained by the Consultative Group on International Agricultural Research (CGIAR), funded by the World Bank, the Food and Agriculture Organization and the United Nations; and small ones at universities and research labs. Seeds are typically stored at minus 4 degrees Fahrenheit, and are periodically removed and germinated to grow plants, whose fresh seeds are redeposited.

But only a few dozen of these banks meet international standards, and even fewer have funding commitments that ensure their long-term maintenance. Indeed, recent surveys have revealed a slow-motion seed bank disaster in the making, with many collections seeing germination rates well below the internationally agreed upon minimum of 85 percent.

Worse, some seed banks have recently been destroyed, the victims of war and unrest in Afghanistan, Iraq and Rwanda and a reminder of the fragility of these resources. A backup bank could resupply regional banks like those.

Perhaps most important, most of today's seed banks are designed to be working banks -- their contents available to breeders and researchers. That means they are inherently accessible and less than totally secure.

"Svalbard is meant to be the bank of last resort," said Pat Mooney, executive director of ETC Group, a Canadian civil society organization focused on food security. "It's where you go if you can't go anywhere else. It's the backup for the whole world."

The design, described in a recently released feasibility study, bespeaks that Armageddon mentality. First, there is the location: The starkly beautiful and always frozen terrain of Svalbard is, to say the least, off the beaten track. Home mostly to a small community of scientists, coal miners and support staff, it is the northernmost place in the world with scheduled commercial air service.

Arctic foxes, reindeer and polar bears stroll the streets.

Yet it also has the basic infrastructure that's needed, including a modest network of roads and an electrical generating plant fed by local coal.

Plans call for a cavern about 50 yards long, 15 feet wide and 15 feet high. Although it will be built in solid rock, its floor, ceiling and walls will be lined with three-foot-thick layers of high-quality insulating concrete. The door will be opened only once or twice a year, to check contents and add new varieties.

Air handling equipment will bring in outdoor air during the winter months, when temperatures hover around minus 30 degrees. Refrigeration units will be available to keep interior temperatures cold during Svalbard's summer, though scientists expect the equipment will rarely be needed and no one will panic if it occasionally breaks down.

"Even if you waited a couple of years for the serviceman to show up, it won't really matter," quipped Geoffrey Hawtin, a genetic resource specialist based in England who is serving as a senior adviser to the Global Crop Diversity Trust.

"One hears so much about mammoth skeletons and that sort of thing being preserved in the permafrost," Hawtin said. "But this is the first deliberate attempt to use the permafrost to conserve what must be humanity's most important but least-known resource."

The Norwegian government is paying for the facility's construction -- an estimated \$3 million, with about half of that for the concrete alone, which must be shipped. After that, annual operating expenses are expected to be \$200,000 at first, dropping to \$100,000 by year three. The trust has established an endowment that so far has \$50 million of the \$260 million that will be needed to sustain operations without depleting its principal. Contributions have come from about a dozen countries as well as foundations, seed companies and others.

The vault is one of many strategies being implemented in sync with the International Treaty on Plant Genetic Resources for Food and Agriculture, which came into force in 2004 and has been ratified by more than 100 nations. The United States has signed the treaty, but the Senate has not ratified it. At the first meeting of the treaty's governing board last week in Madrid, representatives agreed on crucial legal language that will allow nations to maintain essential patent protections while freely sharing their seeds -- an achievement that participants said will greatly facilitate nations' willingness to donate to the Svalbard vault.

Seeds will be sealed in aluminum foil and stored in batches averaging 500 per package, depending on seed size. The facility is designed to hold 3 million varieties, assuming an average seed size equal to that of a wheat seed.

Planners had to consider what would happen if global warming continues unabated. Computer models suggest that no matter what, Svalbard will be one of the coldest places on Earth, Fowler said.

And if, as some models predict, global warming shuts down the Gulf Stream and turns the Greenland Sea into a place even more frozen than it is now? It will still be easy enough to keep the door clear of snow, according to the analysis.

Hope Shand, research director at ETC Group, which champions farmers' rights, emphasized that banks such as Svalbard's are just one part of the global effort to conserve plant genetic resources. "Ultimately," Shand said, "it's the farmers who grow these crops who are the true custodians of crop diversity."

If you are interested to check out the other rail perspective from a biblical balanced two rail worldview, keep reading from another author.

DOES GENETIC ENGINEERING HAVE GOD'S ENDORSEMENT? By Greg Ciola

Stories about genetic engineering have been making headline news recently. For instance, rice grown with human genes has been given the green light for commercial production by the USDA. Meat from cloned animals is now okay for human consumption thanks to the FDA. The University of Nevada-Reno has created sheep that are 15 percent human at the cellular level in hopes of using these animals as human organ producing factories in the future. In scientific terms it's referred to as xenon-transplantation. On farms across North America farmers intend to plant record acreage of GM crops in 2007.

Since genetic engineering and biotechnology are now impacting our lives in so many ways, isn't it time that it were examined from a biblical perspective? There is ample evidence from both the Bible and extra-biblical books that shows strong disapproval of genetic engineering.

The author of all life is God and according to the first chapter of the Book of Genesis, He created every species to reproduce after its own kind. Thus, there is no room in God's creation for man to step in and start modifying DNA by cross transplanting the genes from one organism or species into the DNA of another. In essence, man is now creating species variants that God never intended to exist. Such alteration of species specificity is a serious violation of God's natural order, and I believe it to be a corruption of life and an abomination unto the LORD.

"And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind, whose seed is in itself, upon earth: and it was so. And the earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind: and God saw that it was good." (Genesis 1:11-12)

Unfortunately, the biotech industry has upstaged God's role in creation by attempting to modify every aspect of life through their dark science. The genetic codes of each species' DNA are God's doing. They were not put there by some random act of evolution, as most scientists would like us to believe. In effect, what they are doing is mocking God by declaring that nearly everything He made is defective and can be improved upon.

In the Old Testament books of Leviticus and Deuteronomy there are clear instructions on how the Israelites were to farm their land and grow their food.

"Ye shall keep my statutes. Thou shalt not let thy cattle gender with a diverse kind: thou shalt not sow thy field with mingled seed: neither shall a garment mingled of linen and woolen come upon thee." (Leviticus 19:19)

"Thou shalt not sow thy vineyard with diverse seeds: lest the fruit of thy seed, which thou has sown, and the fruit of thy vineyard be defiled. Thou shalt not plow with an ox and an ass together. Thou shalt not wear a garment of diverse sorts, as of woolen and linen together." (Deuteronomy 22:9-11)

Notice that if a field was plowed with an ox and an ass it was a violation of God's law. If a field was planted with various mixed seeds, it too was a defilement and violation of God's law. Therefore, since God is adamant

about not mixing – whether it be in plowing, planting or in the clothes we wear – what do you think His thoughts would be on gene mixing? Let me assure you that when DNA genes are taken from one organism and inserted into another, it too is a defilement of the land and a violation of God's law!

Anyone who can see this biotech time bomb with spiritual eyes will understand that genetically modified foods and genetic engineering are not about improving crops and providing better alternatives to the world. They're about playing God and polluting His whole creation. God's law doesn't sanction genetic engineering and it never will, despite the best efforts of the biotech industry to try and present these altered organisms as something beneficial to the human race. It may very well be genetically modified foods and genetic engineering that finally bring the wrath of God down upon us. I personally believe that this gene altering technology is one of the most critical issues the world is now facing.

The world was already destroyed once at the time of Noah because of what the ancient Book of Jasher seems to clearly indicate was a form of genetic engineering. If scientists insist on playing God, it may not be long before such a divine destruction happens again.

While the Book of Jasher is not actually in Holy Scripture, it is mentioned in Joshua 10:13 and 2 Samuel 1:18. The fact that the Bible cites it twice validates that there was such a book by this name in the early history of the nation of Israel. The book of Jasher is basically a parallel narrative of the first five books of Moses with the exception that it goes into much more detail. With regards to the story of Noah and the flood, Jasher sheds new light on some of the key events that were taking place before God destroyed the world. In light of our current discussion, one of these passages is very pertinent.

"And the sons of men in those days took from the cattle of the earth, the beasts of the field and the fowls of the air, and taught the mixture of animals of one species with the other, in order therewith to provoke the Lord; and God saw the whole earth and it was corrupt, for all flesh had corrupted its ways upon earth, all men and all animals." (Jasher 4:18)

It's also rather interesting to note that when Jesus' apostles asked Him what it would be like before His return He said it would be like the time of Noah. Might He have been referring to events similar to those cited in the Book of Jasher? Is modern genetic research simply a replay of ancient history? The evidence is certainly enough to make one stop and think.

Notice how God describes the destruction He was about to bring to the world during Noah's time in the book of Genesis.

"And the LORD said, I will destroy man whom I have created from the face of the earth, both man and beast, and the creeping thing, and the fowls of the air; for it repenteth me that I have made them." (Genesis 6:7)

No doubt there were many reasons why it repented the LORD that He made man, but one of the most significant ones appears to deal with genetic modification. It is obvious from both Genesis and Jasher that the whole world had become altered because of the genetic technology that was taking place.

“The earth also was corrupt before God, and the earth was filled with violence. And God looked upon the earth, and behold, it was corrupt; for all flesh had corrupted his way upon earth.” (Genesis 6:11-12)

After much deliberation and research, it is my belief that genetically modified foods and genetic engineering as a whole may be leading up to a final battle between good and evil. The biotech companies have drawn a line in the sand and are determined to fight with all of their resources to implement this technology on a global scale. Despite past protests against GM foods in Europe and a growing juggernaut here in America, genetic engineering plods relentlessly forward – apparently unstoppable! Yet if God’s word can be trusted – and it can – then it’s just a matter of time before He steps in to put a halt to this outrage. These huge multinational biotech companies may in fact be getting into a battle that’s more than they bargained for.

If you don’t think food is a critical issue in the eyes of God, let me remind you that it was the consumption of a forbidden food in the Garden of Eden that led to the fall of man. Adam and Eve broke God’s very first commandment and ate the food from the Tree of Knowledge of Good and Evil. Do you really think Satan would forego a strategy that worked so well for him back in the beginning? Might he now also have the whole world breaking God’s food laws and eating the wrong food in the form of GMOs? And just remember one very important thing, Satan doesn’t care whether you know it or not. As long as he can stand before our Heavenly Father and accuse us to Him, that’s all that matters. (See Revelation 12:10)

If you are still not convinced that genetic engineering violates God’s law, there is yet another powerful Bible reference that seems to speak directly to the issue of genetically modified foods. It comes from the Book of Matthew in the New Testament. Jesus relates a parable that, to me, is very applicable to the subject.

“And another parable put he forth unto them, saying, ‘The kingdom of heaven is likened unto a man, which sowed good seed in his field: But while men slept, his enemy came and sowed tares among the wheat, and went his way. But when the blade was sprung up, and brought forth fruit, then appeared the tares also. So the servants of the householder came and said unto him, Sir, did not thou sow good seed in thy field? From whence then hath it tares? He said unto them, An enemy has done this. The servants said unto him, Wilt thou then that we go and gather them up? But he said, Nay; lest while ye gather up the tares, ye root up also the wheat with them. Let them both grow together until the harvest: and in the time of harvest I will say to the reapers, Gather ye together first the tares, and bind them in bundles to burn them: but gather the wheat into my barn.’” (Matthew 13:24-30)

For those of you who don’t know what tares are, they are the next best comparison to a genetically engineered version of wheat. Tares are a counterfeit form of wheat. They look exactly like wheat and when they are growing side by side next to good wheat there is no way to tell the difference until they reach harvest time. When tares reach their peak they turn black on the top, the grain is not edible, and the seeds from them in many cases cannot be replanted just like Terminator seeds.

Doesn’t this parable fit our genetic engineering story to a T? God created the world and sowed good seed (with His DNA blueprint)

in the earth. But while we were all sleeping, an enemy came and sowed counterfeit crops (GMOs) in our fields. They may look just like the real deal, even when growing side by side with God’s food. (Doesn’t genetically modified corn look exactly like regular corn?) But they’re not the same – no more than the wheat and the tares are the same. Genetically modified crops are counterfeit crops sown and grown by God’s enemies.

Jesus went on to explain the interpretation of this parable.

“He that soweth the good seed is the Son of man; the field is the world; the good seed are the children of the kingdom; but the tares are the children of the wicked one; The enemy that sowed them is the devil; the harvest is the end of the world; and the reapers are the angels. As therefore the tares are gathered and burned in the fire; so shall it be in the end of this world. The son of man shall send forth his angels, and they shall gather out of his kingdom all things that offend, and them, which do iniquity; And shall cast them into a furnace of fire: there shall be wailing and gnashing of teeth. Then shall the righteous shine forth as the sun in the kingdom of their Father. Who has ears to hear, let him hear.” (Matthew 13:37-43)

Do you see now how pertinent this parable really is? I think it proves rather convincingly that biotechnology is satanically inspired. In my estimation, the multinational biotech companies are playing with fire and they may very well get burned. Through their DNA modification research, these corporations have now crossed over into the realm of the supernatural. Our world will never be the same again as a result of the alterations they are making to nature. Regrettably, GMOs have now been released into the environment and there is no turning back.

Even if the biotech industry stopped growing genetically modified food tomorrow, it would be impossible to totally purge their long-lasting side effects from the earth. The hard, plain truth is that all of the farms in America and around the world growing crops that contain GMOs are already defiled in God’s eyes. Planting crops free of GMOs on the same land that once grew them would also defile and corrupt the new crops. To be purified, the land must be made to rest for a considerable period of time – a highly unlikely scenario when you consider the financial impact such an action would have. Yet, only such a long rest of the land will make the ground once again acceptable to God. There appears to be no easy way out of the crisis we have created. In light of the seriousness of the situation, might the following quote from Habakkuk have anticipated the coming genetic engineering apocalypse?

“Though the fig tree may not blossom, nor fruit be on the vines; though the labor of the olive may fail, and the fields yield no food; though the flock be cut off from the fold, and there be no herd in the stalls – Yet I will rejoice in the LORD, I will joy in the God of my salvation.” (Habakkuk 3:17-18)

The following passage from the New Testament should serve as the final warning to the biotech industry as they plod forward proliferating gene-spliced crops:

“Every plant, which my heavenly Father hath not planted, shall be rooted up.” (Matthew 15:13) © 2007 Greg Ciola - All Rights Reserved

Greg Ciola is the editor and publisher of Crusador, a hard-hitting alternative health publication that sheds light on many critical health issues. Ciola believes that there is a conscious effort going on to sabotage our health. His mission is to actively educate others by explaining the reasons why many health problems are occurring, and what can be done so you, your family, and your loved ones can stay well.

A Russian Babushka Egg Reflection on the Apocalypse

To fully understand the coming Apocalypse requires spiritual maturity. A child not yet educated cannot delineate truth from fiction and begs the question why is it still so difficult for so many educated university graduates to understand the Bible? It becomes obvious that a spiritual book dealing with the spiritual side of man needs a tutor of the Holy Spirit who wrote the book.

To get connected with that tutor, we must first read the book and find the connection to follow its trail. On our journey we should watch out for one-sided confused theologian and scientist, which have been educated in atheistic based monorail education system leading into a monorail perspective rather get acquainted with the two dimensional *Heh-Daleth* dual railroad worldview perspective you can learn about reading the first two books on the Internet for free. The reason for being lopsided out of balance is given in the Bible, which tells us that the denying the existence of the creator develops in not having wisdom to delineate fact from fiction. Because of rejecting God's existence altogether will result being already judged and punished. It is like a domino effect being forced to believe in Satan's lie, which becomes a straight jacket with hands tight behind our back to walk the final destination facing the "White Throne" to be condemned to eternal death to exist no more. Choose Life - a better choice.

Logically expressed like the cause and effect law operating in our world would dictate that man could never be forgiven by an "un-person" if denied to exist. Therefore, if God does not exist how could He otherwise communicate his existence as superior intelligent to me? It is not possible for a spiritual dead person to recognize God's spirit consequently can only become aware of its divine presence reflected in embedded intelligence design if we analyze nature.

However, even understanding physics cannot prove the spiritual world existing from another dimension because it is conforming to spiritual laws, which is different like chasing your own tail. We are trapped within a closed system and only extraterrestrial information can break the cycle. GMO and DNA now getting the attention will always remain a mystery in the midst of other familiar secrets of nature like magnetism, electricity, gravity we use but do not know why and where it came from especially defining "life" or even "death." Life is the fuel of genetics and DNA original embedded breathed by God into every cell and made Adam a living spirit science will never define, unless you delineate the divine. Intuitively we feel that there is something missing expressed in

an old paradox postulating; if there is no sound would there be ears to hear, or would the world exist if we turned off the light. Apply that logic when we deny the existence of the other side. To me rationally if we are not connected with the other side we remain dumb like an animal with very limited reason. Even ventured to travel into the vast universe we would still not have found the missing link analogue the lights switch not turned on.

The Bible declares us spiritually dead but gives hope to find the light switch and would give us a choice just turn on in our innermost being the light or remain in darkness. That would link us to the other side and discover that we had along a third eye we never knew existed analogue the Hebrew code assigned a place in the Alphabet number system and names it #70-*Ayin*. A two rail worldview is like the light switch turned on, which may restore the *Ayin* sight to see the world from a two perspectives *Daleth-Heh* dimension like physics-spirit controlled, which ultimately will lead to the source of our existence to discover God. That will answer many questions why we were created, the purpose for us being born and why do we live on a defined globe on the edge of the universe we cannot escape and many more questions answered guaranteed.

However for those in the middle who found the light switch and believes that God exists, He invites them follow the trail now outlined with the path well illuminated guaranteed to discover the invisible family of God, which are known as the Saints to be included. They will become visible on future date being born on the First Resurrection commencing after the apocalypse 7th trumpet. The placenta at birth representing all evil perpetrated during 6000 years *Zayin* age will be discarded and burned. A new civilization of godly educated people will emerge lasting 1000 years of peace. God has announced the ending of our civilization like in Noah's days with a future date imbedded in four babushka eggs and gives us warning for survival. Nineveh's messenger Jonah or Methuselah's⁴⁹ seemed to be a failure judging its result still God's mercies promised to Adam now extending to 6½ billion people today, which is repeated again. Another Jonah came to New York town announcing a date connected with two witnesses. Why two? Because in our civilized courts of law, two witnesses are required to establish truth.

There are now six witness Babushka books on the Internet, which explain the Plan for Humanity since creation never expressed in a total perspective of a dual railroad perspective science and religion for better balance. If you started out with the first book you will notice that I use an analogy like a Russian Babushka egg, which has six eggs identical imbedded within each other. That is now carried forward and became four books for mystery reasons I had no control over, all explaining the same but on different levels. These Babushka books proclaimed the plan of God for Mankind from God's perspective and using science, ancient oracles and prehistoric bronze-gold clocks still not figured out by scientist how they work in thousand years.

What we will learn from six Babushka eggs is that the new prophesied age for humanity is called the Kingdom of God [*Teth* Age] in contrast with the kingdom of darkness [*Zayin* Age]. The two witnesses of the last two booklets mini egg will testify against the most evil generation

⁴⁹ The name Methuselah means: "When he dies, it will happen."

lived during those 6,000 years is the GMO report initiated as a warning for the government on the local to congressional level. The other is about ancient bronze-gold clocks⁵⁰ exhibited in many museums around the world and now deciphered to establish a common Gregorian adjusted calendar to project the Apocalypse accurately. They represent a dual perspective from science and religion, and all match the same date 2012 and you should ask the question "Why?"

Spiritual blind people will not get it as God prepares the elect for survival to save those who will start a new civilization with godly people known as the golden age for humanity. To find out what will happen the next nine years and thereafter and if you are educated to read, you may be chosen by God to belong. Therefore asked Him to be the tutor for you and reveal mysteries buried in the Bible. Then we will understand Daniel ending his prophecy and was told that there will be some "wise" people who will know the total plan of creation for humanity.

Open any hotel Bible of 1,600 pages expanded into ten thousands of words expressed in your own ethnic language translated and discover a micro egg from the *Heh* dimension code. God's purpose for humankind can be summed up in the first three Hebrew words in Genesis linked to, or completed by, the last two Greek words of Revelation:

[In the beginning,] [created] [God] – [all] [the Saints]

To understand what the Saints are, the reason and their purpose in the universe transcending the time dimension is for you to discover as there exist now six Babushka eggs containing two books of creation concepts and four witnesses avoided by the Christian establishment and the scientific world as Satan will not allow them to be sold in his controlled stores.

The *Heh*-dimension gives the saints a new royal title with a new name only you will know personal like a password to eternal relationship with direct access to the Creator. Then you will know that you belong to his family to live on a new earth and new heaven of the *Jod* dimension promised after the *Daleth* dimension disappears. They are the ones who have an ear to hear embedded with a deep spiritual hunger to become a saint. Check it out on the Internet bookstore, which cannot be silenced by Satan's henchmen.

Babushka Book References

The First Babushka book, Apocalypse Prophesied: From Eden to New Jerusalem, presents God's 7,000-year Plan for Humanity depicted by a cuckoo clock system composed of two dials. Each dial marks the time dimension by cycles according to the Hebrew Rosetta Stone 7:5 ratio - a peculiar clock used on earth. Anciently, the earth experienced a wobble in its rotational axes that required early priests and astronomers to devise calendars with two dials. One dial became the time cycle allocation for Satan the school teacher of evil, and the other clock dial became the history trail for mortals, who are the students in Satan's school.

⁵⁰ Asteroid Answers to Ancient Calendar Mysteries.

Both run in parallel but are shown as two dials operated autonomously with different sets of time cycle gears. A cuckoo clock has gears embedded to measure time, and God's schedule for humankind was, therefore, laid out in advance within the pages of the Bible. God recorded the most important events in the history of mankind in advance and laid out the rules how to live in harmony with nature. His hope was that we would learn about heaven, hell and the future Jod Dimension.

This book provides a synopsis of God's plan from the creation of the universe to the end of human history. It was written for those who might not have easy access to a Bible and so includes a thousand Bible verses that can be read free on the Internet in four languages. The entire book (or by chapter) may be downloaded for free in all four languages. Published English, Spanish and German editions may be purchased through our Amazon book store.

The Second Babushka book, Mystery of Tammuz 17: Ancient Hebrew Keys to Dating the Apocalypse, details the main events of the Apocalypse. The seven years ending our present age of human strife under Satan's schooling ends with the birth of the **Saints**, the graduates of Satan's school who will be resurrected into the Jod dimension.

The present, corrupt and evil world system will be terminated and burnt by cleansing fire to remove harmful genetically modified organisms. Satan and his school will be disposed of - like a placenta no longer needed. As the inoculated against evil Saints are released from the present age school of evil, the teacher is put in jail for one thousand years. This book explains many mysteries found in reading the Bible that have stumped theologians for centuries. In particular, it explains how key events of the Apocalypse can now be dated and why it was not possible before. The prophesied Apocalypse will take place over a seven-year period, which was precisely scheduled from the beginning of time.

Those interested to know **how**, **when** and **what** will happen must read this second Babushka book specializing in the Apocalypse, 21 December 2008-2015. It is also translated and found online in four languages.

It was also written for those who might not have easy access to a Bible and so includes a thousand Bible verses that can be read free on the Internet in four languages. The entire book (or by chapter) may be downloaded for free in all four languages. Published English, Spanish and German editions may be purchased through our Amazon book store.

The Third Babushka book, Asteroid Answers to Ancient Calendar Mysteries: 2012, Aztec Pyramids, Antikythera & Other Ancient Calendar Clocks, is about this special place we call earth and how it got started. Since many theologians and scientist are ignorant of the Bible

and nature, they think that God must be stupid. They do not think He has a Plan that He can manage. They do not know about His cuckoo clock seen above his Throne in Heaven as described by John in the book of Revelation. Yet, the ancients did know some interested parts of the story, which serve as independent, historical witnesses across the ages and from around the world that confirm the prophetic, written Word of God called the Bible.

Keeping a schedule for people and Satan requires a clock, and I am not surprised to find one clock veiled in heaven as the plan for humanity originated there. Clocks are as important on earth as they are in heaven because we mortals are usually running out of time. It is one of our most frequent complaints.

Because the earth once had a rotational wobble, it posed a great challenge to early scientists and priest. It is very interesting to see how various ancient cultures solved the common problem of uneven years and shifting lengths of seasons by building so many pyramids, outdoor observatories, clocks and calendars. Each of their complicated systems required advanced mathematics, which has not been understood in modern times because almost all university researchers assume that the earth's seasonal cycles have remained unchanged for billions of years. This book required a great deal of research work balanced with wisdom, which took some time to accumulate.

To tell scientists believing in evolutionary fairytales elevated to educational dogma requiring billions of years is a challenge to any writer. Yet, with all of our modern technology, most still do not know the purpose for human existence and do not know why the universe exists either. God at last now revealed through my hard work, many mysteries concerning ancient bronze-gold clocks hanging in museums, ancient pyramids and stone circles and even reason for some of the traditionally preserved features found in fancy clocks from the Middle Ages that really served no critical function, such as the last ancient astrological clock design in Prague high up the bell tower that even serves as a model for a cuckoo clock sold to tourists.

This book upends a lot of faulty teaching found in universities being postulated by an atheistic academic priesthood trying to undermine and silence God's Word. Ancient clocks adjusted to NASA atom clock calculations were needed by God, and by mankind, to keep a redemption plan right on schedule. That schedule reveals preset dates of ancient prophecies dated like a railroad is planned with stations in different time zones.

Not knowing God's Plan for Humanity has created much confusion in Bible seminaries, where ivory tower philosophers come up with all kinds of dogmas that do not make scientific sense. Faith got a bad repudiation from these dreamed up religious dogmas because the theologians did not recognize the logical, scientific evidence embedded in the Bible, which is identified clearly once one knows God's Plan for a new Jod universe. We can find out about the schedule and learn a lot about physics in the process. Bible prophecy connects to a time dimension following scientific laws, which puts the Bible back on top, worthy once again of great respect.

The Fifth Babushka book, Reflections on Global Warming, is about one of the latest and most popular hot buttons for politicians to put more money in their pocket. Not surprisingly, they are not interested to learn that historical events reported in the Bible can tell us the cause of global warming.

We can read about climate change in ancient books of many civilizations especially coming from a historic 4,000-year Bible perspective. Learning about events recorded by ancient eyewitness can aid us in a global warming theory why the weather is

changing in our time which could give us enough data for a climate model and not wasting a lot of dollars in wild speculative assumption on top of assumption. Therefore global warming discussion connected with the Bible should not be stifled by the establishment as I invite my fellow scientists to get a little educated in the true realism of what is happening to our globe from a spiritual Christian perception using an dual rail approach.

If you want to be educated in science from God's perspective, this short booklet unifies a number of scientific and theological concepts that are scaled from larger to smaller patterns of structured principles and revelation. Studying God's creation increases knowledge and makes us wiser.

The Sixth Babushka book, A Donut Atom Nuclear Story, is about how God created the universe. For centuries people looked up into the starry sky and wondered about how it got started. How old is the universe? Why does it exist?

When electron microscopes were invented, it became possible to look at the universe found within an atom. At the subatomic and atomic levels, the smallest scale model of the entire universe may be found. The universe's vast spaces between humongous galaxies are replicated by the relatively vast spaces found between an atom's particles. Today, peering through a telescope or a microscope looks the same.

Many forces we experience daily cannot be fully explained by physics. For example, how is "life" manufactured? Where did it come from? The same line of questioning applies to gravity, which is still a mystery. Add to it magnetism, electricity, light and what we call the dimension of time, and even more concepts debated in science and religion in fact become even more complex. Their study demands a concentrated gathering of information that seems to come with a lot of confusion not following the path of logic. They become so complex that their equations cannot be processed without massive computers capable of handling billions data bytes per second.

However, God has turned on the light to shine in darkness. Now, for the first time in history, His Plan for Humanity has been more completely revealed from the dual perspective of applied science and the Bible. That is because the time has come for the Apocalypse to begin, which will consummate human history outside of God's government. These ideas will not be found in theological institutions or explained in the halls of leading universities. They arrived just in time to set the record

straight for scientists during a generation degenerated by an atheistic education system and devoid of common sense.

This final Babushka book presents a new theory of atomic structure. Many believe in fairytales and false doctrines invented by fallible human beings that blind them to the total picture of God's plan for humankind from a heavenly or Heh perspective. To understand the time dimension of the material universe, we need clocks. The first cuckoo clock invented is in heaven. It was not made in Germany.

But clocks with cycle gears are linked to calendars that must work together like calculators measuring time. It requires a little background knowledge to understand how it works. My theory of atomic structure is a concept from the Bible that is much better at explaining the laws of physics, such as how gravity works. I present it from a biblical perspective unheard of in the halls of higher education. The Donut Atom Theory explores an intelligence system embedded within the rainbow found above God's throne in the bible's book of Revelation. It looks at atomic structure and the physical laws of the universe from God's perspective. To read it, one must first acquire a little instruction on how atoms were created as related to the beginning of the universe. The answer conforms to God's Plan for Humanity. Without that plan nothing makes sense, which is why atheistic university halls are full of confusion and false teaching. My last Babushka book explains nuclear science in simple language for the average person.

All six Babushka eggs come together in one unifying concept expressed in a two-rail perspective from a 4,000-year-old book, the Bible, which humanity has mostly rejected. The GMO story has answered the question why will there be an Apocalypse and started out with a letter send to the Board of Supervisor in Mendocino California in November 2006 and later reprinted slightly edited in the **Anderson Valley Advertiser Newspaper**, Mendocino, California. Since that time I collected six month of scientific magazine articles data appearing nation wide until May 2007 to measure its progress and let you now how late it is on God's clock. I was shocked to say the least as new developments in the GMO Frankenstein world will and must usher in the Apocalypse to save humanity from extinction as the process of extinction in the animal-vegetable kingdom is now started.

The green horse rider in Revelation can now be identified as the GMO technicians causing 1/3 of the world population to die according to Revelation. God is love and would never indiscriminately kill without purpose. Seeing humanity destroying themselves and with it the environment the very earth giving life to all what has breath now totally destroying it with flesh eating bacteria resurrected from the grave and vast nuclear contamination from New York to nuclear destruction of many cities in the Middle East, heated up in a conflict with 200 million soldiers in another world war and in addition genetic destroying all food to become extinct must be stopped. Reading about China's space threat in Popular Mechanics⁵¹ makes me wonder how 200 million soldiers could have assembled for the last battle in Armageddon, which must have had all communication satellites world wide destroyed as

⁵¹ China's Space Threat –Battlefield Space, by Carl Hoffman, **Popular Mechanics**, July 2007.

foretold in that magazine article. That would explain the American military force absent in Revelation, which experienced a total collapse of their high tech military capability as the magazine story sheds more light on my second Babushka book.

I wrote you a roadmap to survive and possible stay alive through the holocaust costing me much of my retirement since I have grandchildren and ask the question; what will you do?

Going back to the congressional investigation March 2007 why bees dying on a massive scale, if God does not interfere with an Apocalypse as prophesied to save some of humanity then believe the one lone honest scientist prediction standing before a congressional committee March 2007 to senators will then match my biblical worldview laid out in four books with a lot of scientific and Biblical information to add to his prophecy.

Watch 9 February 2009, and you be the judge!

CITIZEN PETITION BEFORE THE UNITED STATES FOOD AND DRUG ADMINISTRATION

CENTER FOR FOOD SAFETY et al., Petitioners,
(660 Pennsylvania Ave, SE, Suite 302
Washington, DC 20003)

v. Docket Number _____

Filed With:

ANDREW C. VON ESCHENBACH, Acting Commissioner

Division of Dockets Management

Food and Drug Administration

5630 Fishers Lane, Room 1061

Rockville, MD 20852

MIKE LEAVITT

Secretary of Health and Human Services

U.S. Department of Health and Human

200 Independence Avenue, S.W.)

Washington, D.C. 20201)

PETITION SEEKING REGULATION OF CLONED ANIMALS

Pursuant to the Right to Petition Government Clause contained in the First Amendment of the United States Constitution, 1 the Administrative Procedure Act, 2 and

1 “Congress shall make no law ... abridging ... the right of the people ... to petition Government for a redress of grievances.” U.S. Const. amend. I. The right to “petition for redress of grievances is among the most precious of the liberties safeguarded by the Bill of Rights.” *United Mine Workers of Am., Dist. 12 v. Ill. State Bar Ass’n*, 389 U.S. 217, 222 (1967). It shares the “preferred place” accorded in our system of government to the First Amendment freedoms, and has “sanctity and a sanction not permitting dubious intrusions.” *Thomas v. Collins*, 323 U.S. 516, 530 (1945). “[A]ny attempt to restrict those First Amendment liberties must be justified by clear public interest, threatened not doubtful or remotely, but by clear and present danger.” *Id.* The Supreme Court has recognized that

2 the Food and Drug Administration’s (“FDA”) implementing regulations,

3 petitioners respectfully request that the FDA regulate cloned animals as a “new animal drug” subject to the relevant requirements of the Federal Food Drug and Cosmetic Act (“FFDCA”).

4 FDA’s continued failure to regulate cloned animals is inconsistent with its regulatory authority and with its treatment of genetically engineered animals and other cloned products as drugs. This action is necessary to ensure that food from animal clones does not pose safety risks to consumers and that animal cloning does not pose new animal cruelty risks. In addition, this action requests that the ethical issues of animal cloning be thoroughly examined prior to any commercialization of any food products derived from cloned animals. Until a cloned animal, its products, or progeny have gone through a new animal drug process and the proper National Environmental Policy Act (“NEPA”) review, FDA must impose a mandatory moratorium on the distribution of food or feed from cloned animals into the marketplace.

ACTIONS REQUESTED

Specifically, petitioner seeks the following:

1. Issuance of an interpretive rule requiring all producers of animal clones to comply with the Federal Food and Drug Cosmetic Act’s new animal drug requirements and FDA’s implementing regulations before permitting the sale of any cloned animals or cloned food products, including reviewing the health risks from consuming milk or meat products from the offspring of cloned animals.
2. Conversion of its voluntary moratorium on food or feed from cloned animals into a mandatory moratorium until each product of cloning completes the new animal drug process.
3. Preparation of an Environmental Impact Statement (“EIS”) evaluating the environmental and health effects of each new animal drug petition.

Creation of an Advisory Committee to address the ethical issues of animal cloning by the Health and Human Services Department.

PETITIONER

Petitioner, **Center for Food Safety** (CFS), is a nonprofit based in Washington, DC that works to protect human health and the environment by

curbing the proliferation of the right to petition is logically implicit in, and fundamental to, the very idea of a republican form of government.

United States v. Cruikshank, 92 U.S. 542, 552 (1875). 2
5 U.S.C. § 553(e). 3 21 C.F.R. §§ 10.20, 10.30. 4 21 U.S.C.
§ 360b. 3 harmful food production technologies and
by promoting organic and other forms of sustainable
agriculture.

Petitioner, **American Anti-Vivisection Society** (AAVS), is a non-profit animal advocacy and educational organization that unequivocally opposes and works to end experiments on animals, and opposes all forms of cruelty to animals. Founded in 1883, AAVS is the oldest organization in the United States devoted to ending the use of animals in research, testing, and education.⁵

Petitioner, **Center for Environmental Health** (CEH), is a non-profit organization that advocates for public health. CEH prevents pollution and protects the public from toxic chemicals and hazards in consumer products, promoting safe, sustainable food choices and other healthier products and practices.

Petitioner, **Consumer Federation of America** (CFA), is an alliance of over 300 organizations, whose combined membership exceeds 50 million people. CFA members are local, state, and national consumer advocacy organizations, senior citizen associations, consumer cooperatives, trade unions and anti-hunger and food safety organizations. Founded in 1968, CFA employs research, education and advocacy to shape financial services, energy, health care, food, and international trade policies that serve the needs of American consumers. The organization’s policy positions are established by vote of member group representatives. CFA’s Food Policy Institute was created in 1999. The Institute staff works to create rational, equitable and responsible food and agricultural policies that will assure all have access to an adequate supply of safe and nutritious food.

Petitioner, **Food & Water Watch**, is a non-profit group based in Washington DC that challenges the economic and political forces promoting industrialized food production and the privatization of the oceans and fresh water resources on the local, national and international levels. Through research, public and policymaker education, media, and lobbying, we advocate the development of food systems that guarantee safe, wholesome food produced in a humane and sustainable manner; inform citizens about the dangers posed by industrialized agriculture and aquaculture; and protect people and the environment by preventing the shift of control of water resources including oceans, rivers and groundwater, from the public to private corporations.

Petitioner, **Friends of the Earth** (FOE), is located at 1717 Massachusetts Avenue, NW, Suite 600, Washington, DC 20036. FOE is a non-profit organization that seeks to create a more healthy, just world. FOE is the U.S. voice of Friends of the Earth International, the world’s largest federation of democratically elected grassroots environmental groups, located in 70 countries. 5 AAVS emphasizes that the recommendations that follow aim to limit animal suffering and in no way endorse animal research.⁴

Petitioner, **Humane Society of the United States (HSUS)**, a non-profit charitable organization headquartered in Washington, D.C., is the largest animal protection organization in the United States, with nearly 10 million members and constituents. The HSUS protects all animals through education, investigation, litigation, legislation, advocacy and field work.

Petitioner, the **Religious Coalition for Reproductive Choice**, brings the moral power of religious communities to ensure reproductive choice through education and advocacy. The Coalition seeks to give clear voice to the reproductive issues of people of color, those living in poverty, and other underserved populations. Founded in 1973, the Religious Coalition comprises national organizations from major faiths and traditions, religiously affiliated and independent religious organizations, affiliates throughout the country, the national Clergy for Choice Network, Spiritual Youth for Reproductive Freedom chapters,

The Black Church Initiative and individuals who support reproductive choice and religious freedom.

STATEMENT OF GROUNDS

I. INTRODUCTION

Despite its preeminent role in protecting the nation's food supply, FDA's actions have failed to provide strict regulatory oversight over animal cloning. FDA has stated that it is examining the science to determine whether animal cloning endangers animals and our food supply. *Please read the rest on the Internet where I copied it from:* www.foodsafetynow.org.

What is Faith in the Future Foundation?

Faith in the Future Foundation provides insights into how and why the world is as it is from an integrated perspective of science and spirituality. In our pages you will find solutions that you can apply to your own life now and faith in the ultimate outcome of the world's current trajectory towards increasing political and economic oppression of a global supercultural based on materialism and spiritual confusion. While the short term future looks ominous, there are a number of sound reasons for hope. We do not give up the fight: we endure and continue in confidence.

To most people, what is referred to as "Christianity" seems irrelevant to our modern world. Despite that understandable perception, we believe that the Bible has the answer to the big questions of life when it is unlocked by insights from natural science. By integrating scientific observations with a better understanding of human history, Faith in the Future Foundation offers you valuable educational tools in your search

for spiritual meaning and purpose - for your own life and that of the entire planet. We pray that this support will encourage you towards living a life now that bears abundant fruit in the lives of your family and friends, as well as helping you along on your own journey into an eternity joyfully spent with the Creator who defines true love.

The foundation is not related to any Christian denomination or church. Hence, our Statement of Faith is simple. How each of us puts the principles below to work in his or her personal life varies. Life is a growth experience that occurs at different rates of consciousness and behavior modification. The most important thing is to be on the only guaranteed spiritual way to a good eternity, which is based on these points:

- The Bible is God's word or testimony, the divine revelation of His will and purpose for life. It is the written expression of His Spirit.
- Personal faith in Jesus the Messiah and obedience to God's Word, according to one's understanding, is the only way to receive the Holy Spirit of God, who is the presence of the Father and the Son in the believer, creating a new life that will last for eternity.
- The Holy Spirit is required for continued growth in spiritual matters such as overcoming sin (a changed life today) and a better understanding of the Bible.

Faith in the Future Foundation considers itself a delivery service for the good news of God's coming kingdom without respect to persons or organizations.

Faith in the Future Foundation teaches that a believer's "citizenship is in heaven." The directors do not endorse or support any political party, military operation, forced conversion or change of religious or philosophical beliefs, national entity or any activity that seeks to bring biblical prophecies to pass in this world and time. God is Almighty and able to bring about His prophecies without dependence on human works. He alone can judge the mortal heart and determine a person's spiritual condition and future in eternity.
